MAP Growth Reports

Transforming data into insights that help educators take action

By adapting to each student's learning level, MAP® Growth™ creates a personalized assessment experience that accurately measures each student's performance and growth. Timely reports deliver essential information that can be used to improve both teaching and learning.

Four benefits of MAP Growth reports:

Timely results
MAP tests are scored in real time; students and proctors receive preliminary results at the test's conclusion. Afterward, you can access in-depth reports that show aggregate data by class, grade, school, and district. Most of these reports are available the same day or the next day, while a few can be accessed after each testing window concludes.

Context for student performance
NWEA® provides robust norms for achievement and growth over time. Norms let you compare your students' performance at a single point in time—and their growth over time—with the performance and growth of other US students in the same grade at a comparable stage of the school year. NWEA college readiness benchmark information also lets you use MAP Growth scores to predict future performance on the ACT® (for students in grades 5–10) and the SAT® (for grades 5–9).

Student, class, and district information with flexible display and grouping options
You'll find a variety of MAP Growth reports that help you predict proficiency on state tests, group students for differentiated instruction, and engage students in mapping their own learning plan for the school year.

Flexible reporting formats
While most educators make good use of the preconfigured reports included with MAP Growth, some districts and agencies want the underlying data formatted to import into their own student information or assessment management systems. NWEA provides an online interface to export raw data reports at any time during a testing season—free of charge.

For a comprehensive guide, see MAP Growth report details in the NWEA Help Center.

TABLE OF CONTENTS

MAP Growth Reports

MAP Growth K–2 Reports

The color-coded indicators next to report titles tell you which user role is required to access the report. The color-coded key can be seen below.

Instructor | Administrator | School Coordinator | District Coordinator

You can find a similar color-coded key in the bottom left of each report page indicating which roles have access to that report. If one of the colors is grayed out that role does not have access.

*Note: Prior to July 2021, this report was named Class Breakdown by Goal

ANNOTATION KEY

1. **Norms reference data:** Indicates which NWEA norming study your report data draws upon.

2. **Growth comparison period:** The two terms for which you wish to receive student growth data.

3. **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.

4. **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.

5. **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.

6. **Mean RIT score:** The group's average score for the subject in the given term.

7. **Median RIT:** The group's middle score for the subject in the given term if individual scores were ordered from lowest to highest.

8. **Standard deviation:** Indicates academic diversity of a group of students. The lower the number, the more students are alike (zero would mean all scores are the same). The higher the number, the greater the diversity in this group.

9. **Standard error of measurement or error margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.

10. **Sampling error:** An estimate of the amount of error in an aggregate statistic (commonly the mean) attributed to calculating the statistic on a population sample rather than on the entire population. The larger the group, the lower the sampling error.

11. **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

12. **RIT score:** A student's overall scale score on the test for a given subject.

13. **RIT score range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14. **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

15. **Lexile®/Lexile range:** Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

16. **Area of relative strength:** Chosen relative to the whole subject score, plus the standard error.

17. **Suggested area of focus:** Chosen relative to the whole subject score, minus the standard error.

18. **Number of students with growth projection:** The number of students in the growth count population with available growth projections.

19. **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

20. **Segmented bar graph:** Shows the number of students who scored within each percentage range—low, medium, and high. A student's range is based on the proportion of questions they answered correctly in that section of the test.

21. **The Learning Continuum Class View report:** Shows skills and concepts to develop with groups of students, based on 10-point RIT score bands indicating what they are likely ready to learn.

22. **The Learning Continuum Test View report:** Shows skills and concepts to reinforce, develop, and introduce, based on 10-point RIT bands.

23. **Learning statements:** Statements that define learning objectives to help guide instruction.

24. **Projected proficiency category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP Growth RIT scale to state assessments and college and career readiness measures.

25. **Projected RIT score or RIT projection:** The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

26. **Projected growth, growth projection, or typical growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

27. **Observed growth or RIT growth:** The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

28. **Observed growth standard error:** Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth, plus or minus the standard error.

29. **Growth index:** The difference between observed and projected growth. A zero indicates the student met projection exactly. Do not use this index to compare performance between students; use the conditional growth index (see annotation 31) instead.

30. **Met projected growth:** Indicates Yes if the student's term-to-term growth equaled or exceeded the growth projection and No if growth was less than projected. A ‡ means that the difference between the student's observed and projected growth is less than the observed growth standard error.

31. **Conditional growth index:** This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction before testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

32. **Conditional growth percentile:** The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

33. **Percentage of students who met growth projection:** The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.

34. **Percent of projected growth met:** The total student growth divided by the total projected RITs, expressed as a percentage. Performance of 100% is considered average, meaning the overall student growth equaled the projections. Use in conjunction with annotation 33.

35. **Total number of growth events:** The number of students with valid growth-based test events for both terms.

36. **Number of students who met their growth projection:** The number of students whose end-term RIT scores met or exceeded their individual growth projections.

37. **Median conditional growth percentile:** The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.

38. **School conditional growth index:** This index allows for growth comparisons between grades within schools. It incorporates conditions that affect school growth, including weeks of instruction before testing and starting grade-level Mean RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

39. **School conditional growth percentile:** The school conditional growth index (see annotation 38) translated into national percentile rankings for growth.

40. **Set goal:** Set custom growth goals for your students. In the example, the educator and student have already set a catch-up growth goal for winter and are about to set one for spring.

41. **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

CLASS REPORT

Class Report—Key Information

What this report offers

- Class-level performance data for a specific test window
- Information organized by class, subject, and test
- Individual student achievement data (such as RIT scores) for students in a specific class
- Comparisons to normative data and district grade-level mean

Questions it helps answer

- How is my class doing overall?
- What is our lowest instructional area? Our highest?
- How are we performing compared to national norms?
- What is the Lexile reading range for my students and my class materials? What adjustments might be needed?
- How much time did each of my students take on the test?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- District-level comparative data is available after your test window is marked closed
- Mixed-grade classes will not display a norm grade-level mean or a district-level mean
- It will include data from outside of your test window (displayed in gray, or low-lighted, text)
- There is a Small Group Display option for classes with fewer than 10 students
- Default settings include sorting students by RIT score (lowest to highest) and displaying descriptors for instructional areas

Explanatory Notes

Tests shown in gray are excluded from summary statistics. Either the test occurred outside the testing window for a term, had an invalid score, or was a repeat test for a student within a term.

Test Invalidation Reasons: ***1 The test duration was too short to provide a valid result. ***2 The overall RIT score for this test is above the valid range. ***3 The overall RIT score for this test is below the valid range. ***4 The standard error for this test is below acceptable limits. ***5 The standard error for this test is above acceptable limits. ***6 The test has been identified as invalid. ***7 High level of rapid guessing has invalidated test.

Due to statistical unreliability, summary data for groups of less than 10 are not shown.
* This data is not available for reporting. Please refer to help and documentation for more information.
Lexile® is a trademark of MetaMetrics, Inc., and is registered in the United States and abroad.

1 **Norms reference data:** Indicates which NWEA norming study your report data draws upon.

3 **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.

5 **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.

6 **Mean RIT score:** The group's average score for the subject in the given term.

7 **Median RIT:** The group's middle score for the subject in the given term if individual scores were ordered from lowest to highest.

8 **Standard deviation:** Indicates academic diversity of a group of students. The lower the number, the more students are alike (zero would mean all scores are the same). The higher the number, the greater the diversity in this group.

10 **Sampling error:** An estimate of the amount of error in an aggregate statistic (commonly the mean) attributed to calculating the statistic on a population sample rather than on the entire population. The larger the group, the lower the sampling error.

11 **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

Instructor | Administrator | School Coordinator | District Coordinator

9 Standard error of measurement or error margin: An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.

11 Instructional area: A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

13 RIT score range: A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

15 Lexile®/Lexile range: Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

19 Instructional area score: The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

Tips and tricks

Test duration: While this report only lists test durations of 60 minutes, this column of data will show actual time-on-test for your students. You will see a range of numbers here, usually between 40–60 minutes. Here is a blog post on the topic: **"How long is too long to spend on the MAP Growth assessment?"**

Viewing options: This report has an option to show RIT score ranges (e.g., 185–194) instead of descriptors (e.g., Low, LoAvg, etc.) for each instructional area.

When the report is generated using RIT score ranges, you will be able to see the areas of relative strength in bold (see annotation 16), and the suggested area of focus in italics (see annotation 17).

CLASS PROFILE REPORT

Class Profile Report—Key Information

What this report offers

- Class-level performance data for a specific test window
- Information organized by class, subject, and test
- Individual student achievement data (such as RIT scores) for students in a specific class
- Comparisons to normative data and district grade-level mean
- Details about the test events for each student

Questions it helps answer

- How is my class doing overall?
- What is the academic diversity of my class?
- What is our lowest instructional area? Our highest?
- How are we performing compared to national norms?
- What is the Lexile reading range for my students and my class materials? What adjustments might be needed?
- How much time did each of my students take on the test?
- Which students haven't completed tests?
- Which students may need to take the test again?

When to use it

- After testing, to see achievement data and test details
- As part of the instructional decision-making process
- When you want to use data to inform student grouping
- Before your test window closes so that you can wrap up any retakes or test completions

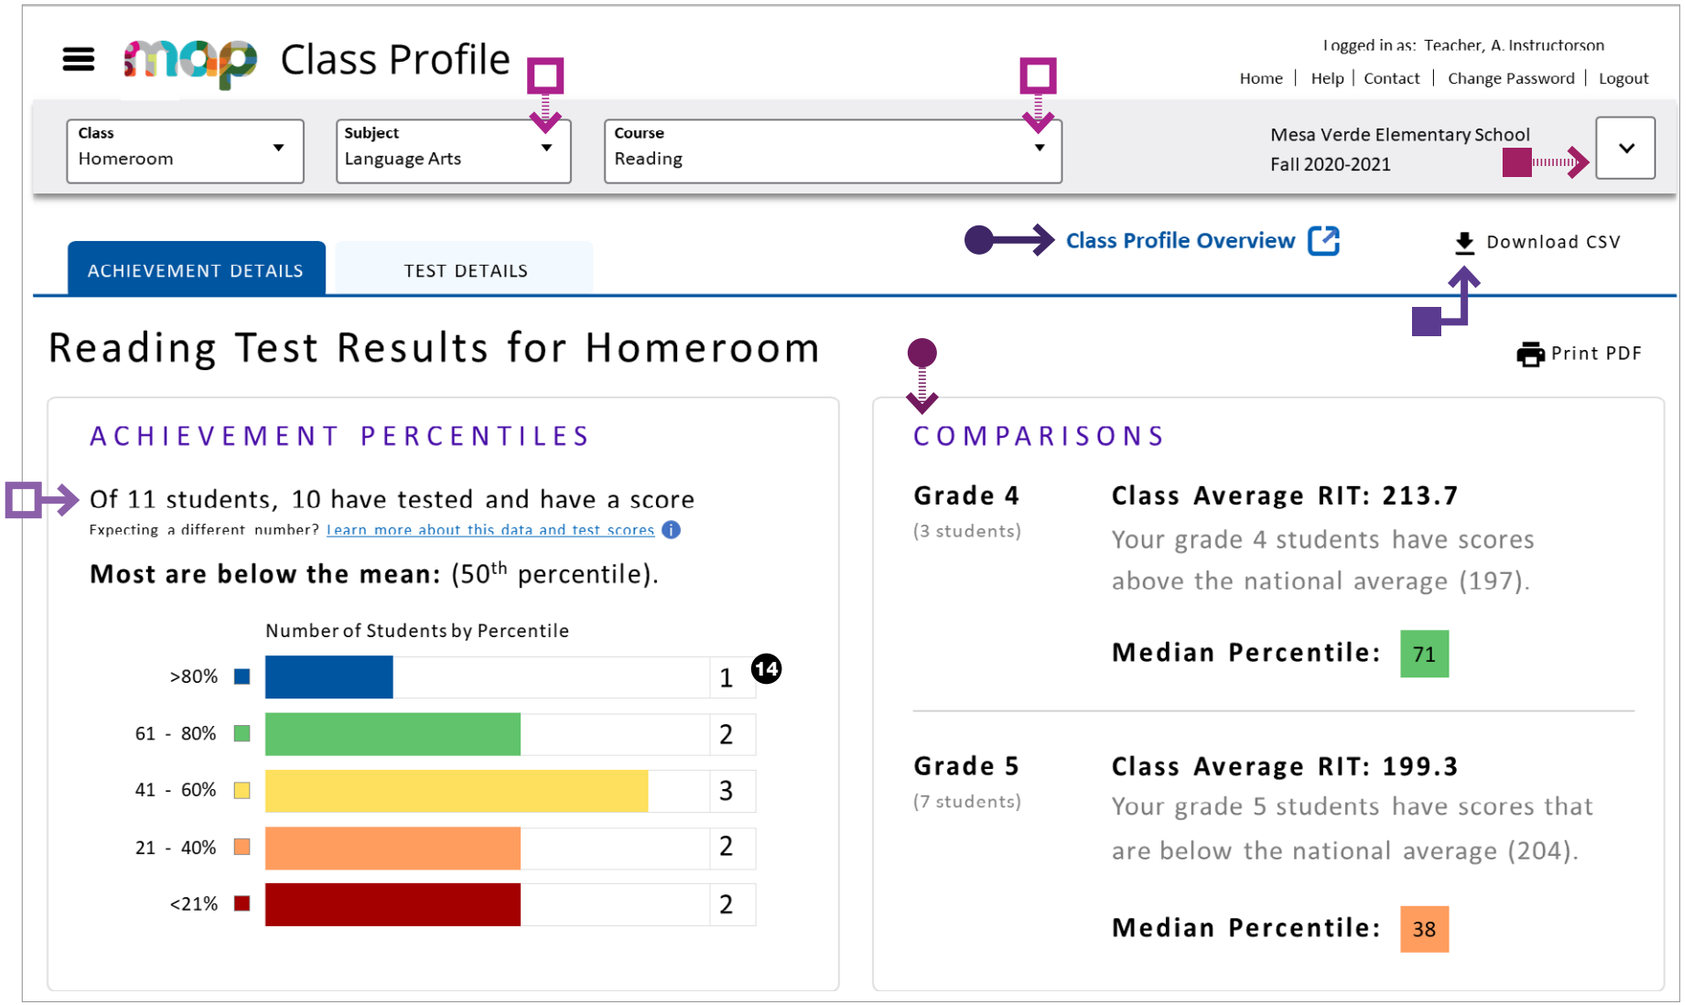
Things to consider

- Instructor-level users will only gain access to the reporting data for the class or classes they have been rostered to in the current or previous academic year
- Mixed-grade classes will display a norm grade-level mean for each grade
- Default settings include sorting students alphabetically by last name and displaying RIT scores for instructional areas
- All columns can be sorted for flexibility in looking at data
- Student(s) recommended for retesting will have an indication in the Rapid Guessing column in the Test Details tab

Notes

Class Profile Report

Achievement Details (1 of 2)



14 **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

Tips and tricks

- You can learn more about the Class Profile Report by clicking this link. You will be taken to the help center page for the Class Profile Report.
- You can download the data contained in the Class Profile Report in a .CSV file format (spreadsheet) by clicking Download CSV.
- The total number of students in your class is determined by how many students are rostered in the MAP Growth system. The number that is given for how many have tested represents how many have a valid growth event.
- Data for a single classroom is broken down by grade to support educators with mixed-grade classes (e.g., a class with 4th and 5th graders combined).
- Clicking this drop-down arrow will allow you to change the school, term tested, term rostered, and instructor.
- There are three available subjects (language arts, math, and science). There can be multiple courses in each subject (e.g., algebra 1 and geometry in math).

12 RIT score: A student's overall scale score on the test for a given subject.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

15 Lexile®/Lexile range: Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

19 Instructional area score: The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

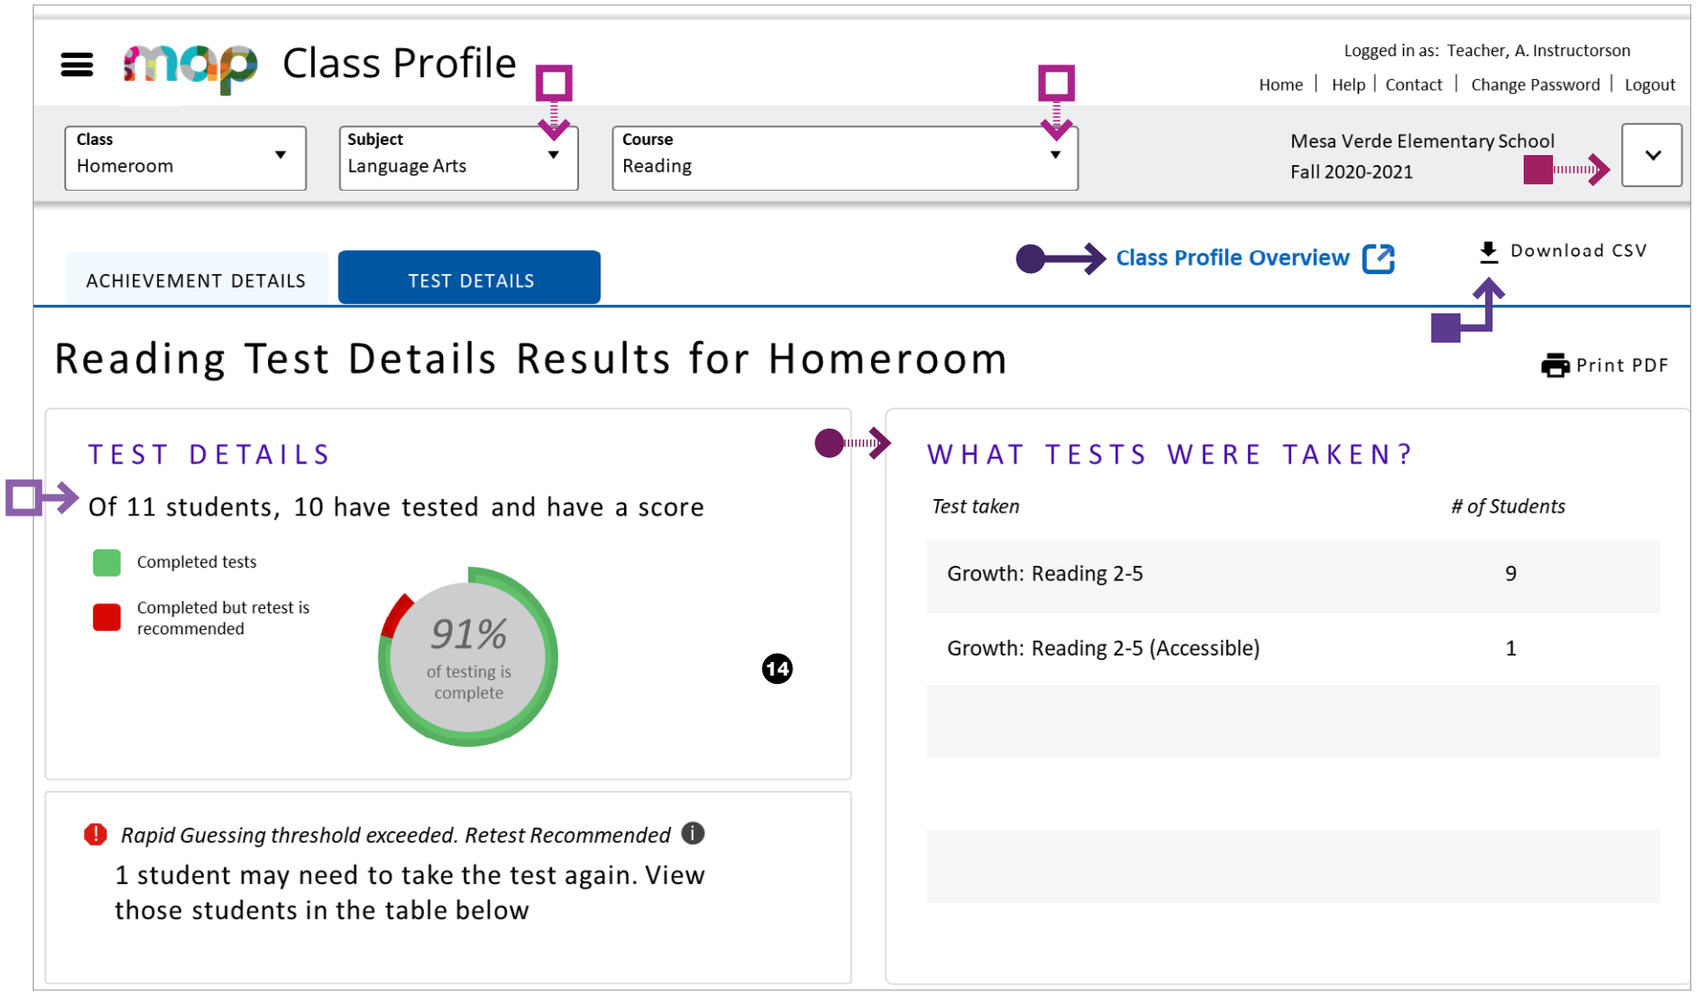
Tips and tricks

You can click on the name of any student to be taken to their individual Student Profile Report.

Clicking on any column header on the Achievement tab will resort the list, toggling between ascending, descending, and unsorted.

Class Profile Report

Test Details (1 of 2)



Tips and tricks

- You can learn more about the Class Profile Report by clicking this link. You will be taken to the help center page for the Class Profile Report.
- You can download the data contained in the Class Profile Report in a .CSV file format (spreadsheet) by clicking Download CSV.
- The total number of students in your class is determined by how many students are rostered in the MAP Growth system. The number that is given for how many have tested represents how many have a valid growth event.
- This section provides a breakdown of which tests were taken by your class within a given course.
- Clicking this drop-down arrow will allow you to change the school, term tested, term rostered, and instructor.
- There are three available subjects (language arts, math, and science). There can be multiple courses in each subject (e.g., algebra 1 and geometry in math).

STUDENT DETAILS

Students	Grade	ACHIEVEMENT Percentile (14)	RIT (12)	Lexile (15)	SEM (9)	TEST DETAILS Test Duration	Rapid-Guessing Percentile (41)	Test Taken
Watkins, Lewis	5	8	177	145L - 295L	±4.2	58 min	4%	Growth: Reading 2-5
Jones, Shelly	5	13	189	380L - 530L	±7.8	40 min	38%	Growth: Reading 2-5
Scott, Virginia	5	25	196	515L - 665L	±3.6	50 min	5%	Growth: Reading 2-5
Kennedy, Kelley	4	60	204	665L - 815L	±2.9	55 min	0%	Growth: Reading 2-5
Griswold, Odel	5	50	207	725L - 875L	±4.0	50 min	4%	Growth: Reading 2-5
Stevens, Sadie	4	71	209	765L - 915L	±3.6	59 min	0%	Growth: Reading 2-5
Carlin, Alishia	5	60	211	800L - 950L	±2.9	51 min	2%	Growth: Reading 2-5
Collins, Keith	5	64	213	840L - 990L	±2.2	64 min	1%	Growth: Reading 2-5
Gordon, Alfred	5	38	202	630L - 780L	±5.1	47 min	1%	Growth: Reading 2-5 (Acce
Washington, Doris	4	95	228	1130L - 1280L	±3.1	70 min	0%	Growth: Reading 2-5
Wood, Jason	5		---		---	---	---	---

(9) Standard error of measurement or error margin: An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.

(12) RIT score: A student's overall scale score on the test for a given subject.

(14) Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

(15) Lexile®/Lexile range: Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

(41) Rapid guess percentage: Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Tips and tricks

This symbol indicates that educators should take notice of the rapid guessing percentage for the student.

You can click on the name of any student to be taken to their individual Student Profile Report.

Clicking on any column header on the Achievement tab will resort the list, toggling between ascending, descending, and unsorted.

GRADE REPORT

Grade Report—Key Information

What this report offers

- School-level performance data for a specific test window
- Information organized by grade level and subject
- Individual student achievement data (RIT scores) for students in a specific class
- Comparisons to normative data and district grade-level mean

Questions it helps answer

- How is this grade level doing overall?
- How does this performance compare to other schools across the district?
- What is this grade's lowest instructional area? Our highest?
- How are we performing compared to national norms?
- What decisions might this inform related to activities such as intervention?
- How could this data guide school improvement planning?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- District-level comparative data is available after your test window is marked closed
- It will include data from outside of your test window (displayed in gray, or low-lighted, text)
- Default settings include sorting students alphabetically by last name and displaying RIT score ranges for instructional areas

Explanatory Notes

Tests shown in gray are excluded from summary statistics. Either the test occurred outside the testing window for a term, had an invalid score, or was a repeat test for a student within a term.
Test Invalidation Reasons. ***1 The test duration was too short to provide a valid result. ***2 The overall RIT score for this test is above the valid range. ***3 The overall RIT score for this test is below the valid range.
***4 The standard error for this test is below acceptable limits. ***5 The standard error for this test is above acceptable limits. ***6 The test has been identified as invalid. ***7 High level of rapid guessing has invalidated test.
Due to statistical unreliability, summary data for groups of less than 10 are not shown.
* This data is not available for reporting. Please refer to help and documentation for more information

1. **Norms reference data:** Indicates which NWEA norming study your report data draws upon.
3. **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.
4. **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.
5. **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.
6. **Mean RIT score:** The group's average score for the subject in the given term.
8. **Standard deviation:** Indicates academic diversity of a group of students. The lower the number, the more students are alike (zero would mean all scores are the same). The higher the number, the greater the diversity in this group.
10. **Sampling error:** An estimate of the amount of error in an aggregate statistic (commonly the mean) attributed to calculating the statistic on a population sample rather than on the entire population. The larger the group, the lower the sampling error.
11. **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

Explanatory Notes

Tests shown in gray are excluded from summary statistics. Either the test occurred outside the testing window for a term, had an invalid score, or was a repeat test for a student within a term.

Test Invalidation Reasons: ***1 The test duration was too short to provide a valid result. ***2 The overall RIT score for this test is above the valid range. ***3 The overall RIT score for this test is below the valid range.
***4 The standard error for this test is below acceptable limits. ***5 The standard error for this test is above acceptable limits. ***6 The test has been identified as invalid. ***7 High level of rapid guessing has invalidated test.

Due to statistical unreliability, summary data for groups of less than 10 are not shown.
* This data is not available for reporting. Please refer to help and documentation for more information.

Instructor | Administrator | School Coordinator | District Coordinator

1. **Norms reference data:** Indicates which NWEA norming study your report data draws upon.
3. **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.
4. **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.
5. **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.
9. **Standard error of measurement or error margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.
11. **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.
13. **RIT score range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.
14. **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).
19. **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

Tips and tricks

Test duration: While this report only lists test durations of 60 minutes, this column of data will show actual time-on-test for your students. You will see a range of numbers here, usually between 40–60 minutes.

Printing options: This report can be generated by instructional area descriptors as well as RIT score ranges.

CLASS BREAKDOWN BY RIT

Class Breakdown by RIT Report—Key Information

What this report offers

- Class-level performance data for a specific test window
- Information organized by class and subject
- Academic diversity of the class in overall subject areas (high-level view)

Questions it helps answer

- What is the academic diversity of my class? How many RIT bands are represented?
- How does our middle RIT band compare to our state-level expectations from the linking study? How does it compare to the national norm?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- It will not include data from outside of your test window
- You can use “term rostered” and “term tested” to see different combinations of data (e.g., this year's students with data from last spring)

CLASS BREAKDOWN BY INSTRUCTIONAL AREA

Class Breakdown by Instructional Area—Key Information

What this report offers

- Class-level performance data for a specific test window
- Information organized by class and subject
- Academic diversity of the class in each of the subject-specific instructional areas (detailed view)

Questions it helps answer

- How can I group my kids by similar readiness?
- How will I need to scaffold my instruction for each group of kids?
- How do the groups change within each instructional area?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- It will not include data from outside of your test window
- You can use “term rostered” and “term tested” to see different combinations of data (e.g., this year's students with data from last spring)
- The student’s overall RIT score appears after their name in parentheses

Instructor | Administrator | School Coordinator | District Coordinator

(11) **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

(12) **RIT score:** A student's overall scale score on the test for a given subject.

(19) **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

Tips and tricks

Drop-down menu: You can use this drop-down field to choose different breakdown reports. The other options available are RIT and Projected Proficiency.

Learning Continuum: Click on any of the instructional areas to see the Learning Continuum Class View.

GRADE BREAKDOWN REPORT

Grade Breakdown Report—Key Information

What this report offers

- School-level performance data for a specific test window
- Information organized in a spreadsheet
- Both overall and instructional area scores for all student in a grade

Questions it helps answer

- How might this data help us make placement decisions for the next school year?
- What do data points like rapid guessing percentage look like across a grade?
- How do the groups change within each instructional area?
- How might this data help us form grade-level groups for activities like intervention or targeted instruction?
- How could this data guide school improvement planning?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- It will not include data from outside of your test window
- You can use “term rostered” and “term tested” to see different combinations of data (e.g., this year's students with data from last spring)
- Default sorting is by test name, but subject is also an option
- Instructional area scores default to RIT score ranges, but descriptors are also an option
- The grade shown for students reflects the academic year you requested. So, if you request this report from a term in the *last academic year*, the grade shown for students will not be their *current academic year* grade

Notes

11 **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

12 **RIT score:** A student's overall scale score on the test for a given subject.

19 **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

41 **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Tips and tricks

Sorting data: This is a CSV report that is typically opened with Microsoft Excel, which makes sorting data fast and easy. Simply open your CSV file, select the data you want to sort, click on Data in the menu bar, and then select the Filter icon.

Note: This report has been formatted to fit this page. You will see the same data fields in the same columns on your report, but the column widths may be slightly different.

CLASS BREAKDOWN BY PROJECTED PROFICIENCY

Class Breakdown by Projected Proficiency Report—Key Information

What this report offers

- Class-level projected proficiency data for a specific test window
- Information organized by class and subject
- Aligned to state assessment and/or college and career readiness assessments (ACT/SAT)

Questions it helps answer

- How are individual students projected to perform on the state assessment? How about the college and career readiness assessments?
- Are any of my students' scores close to the higher/lower proficiency band?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

Things to consider

- Report can access data from up to one year prior
- It will not include data from outside of your test window
- The state and college projections that appear depend on the state alignment your district selected during MAP implementation
- Depending on the state, projections may be limited to certain subjects (typically reading and math) and grades (typically 2–8)
- ACT will show for students in grades 5–10; SAT will show for grades 5–9

PROJECTED PROFICIENCY SUMMARY

Projected Proficiency Summary Report—Key Information

What this report offers

- School-level projected proficiency data for a specific test window
- Information organized by class and subject
- Aligned to state assessment and/or college and career readiness assessments (ACT/SAT)

Questions it helps answer

- How are students projected to perform on the state assessment? How about the college and career readiness assessments?
- How could this data guide school improvement planning?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping
- When preparing data for activities such as school improvement planning or board meetings

Things to consider

- Report can access data from up to one year prior
- It will not include data from outside of your test window
- The state and college projections that appear depend on the state alignment your district selected during MAP implementation
- Depending on the state, projections may be limited to certain subjects and grades
- ACT will show for students in grades 5–10; SAT will show for grades 5–9
- Use the Combined & Comprehensive Data File (CDF) to see which kids are behind the student count at each level, or access each class-level projected proficiency report

Explanatory Notes

This report shows students' projected performance on the state assessment(s) based on NWEA alignment/linking studies. Performance categories are defined by the state and are specific to each state. For any state or location that does not have an associated state summative test the NWEA Generic Linking Study is provided.

Instructor | Administrator | School Coordinator | District Coordinator

4 **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.

24 **Projected proficiency category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP Growth RIT scale to state assessments and college and career readiness measures.

Tips and tricks

State-specific linking study: This takes you to your state's linking study research document.

Categories of proficiency: In this area, you will see your state's specific categories of proficiency.

Aggregation: There are three ways to aggregate this data: District by Grade, District by School, or School by Grade. The first two of these aggregation options require a district coordinator role for access.

DISTRICT SUMMARY: AGGREGATE BY SCHOOL

District Summary: Aggregate by School Report—Key Information

What this report offers

- School-level performance data for current and all historical terms
- Information organized by subject and sorted by grade and term tested

Questions it helps answer

- What can I learn by looking at a cohort of students in my school?
- Are there any trends or differences among grade levels in my school?
- What might changes in RIT or instructional areas tell us about things such as curriculum in my school?
- How could this data guide school improvement planning?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When preparing data for activities such as school improvement planning or board meetings

Things to consider

- Report can access data for all prior years of testing
- It will not include data from outside of your test window
- The Test Window Complete checkbox must be selected for this report to populate with current data
- This report can be aggregated for a school or for the entire district
- Administrators can only order reports that contain data for their schools
- Optional grouping organizes and calculates results by gender, ethnicity, or program; this grouping is coupled with the aggregation chosen (school or district)

FAQ

Q: Why does a report pulled for the fall 2019 time period show scores from fall, winter, and spring of 2018–2019?

A: Let's use the data highlighted above to answer that question. Students in grade 5 during the fall 2019–2020 time period are listed in the row identified by the purple diamond. These same students also took MAP Growth three times during the previous school year (2018–2019). The previous year's (i.e., grade 4) test scores are listed as the fall, winter, and spring scores for the 2018–2019 school year. This group of students had a median RIT score of ***206*** in fall 2018–2019 (grade 4), ***211*** in winter 2018–2019 (grade 4), ***216*** in spring 2018–2019 (grade 4), and ***219*** in fall 2019–2020 (grade 5).

Note: In your report, there will be one data table per MAP Growth test administered in each district. The view above only shows the data table associated with the Math 2–5 test.

Instructor | Administrator | School Coordinator | District Coordinator

4 **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.

5 **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.

6 **Mean RIT score:** The group's average score for the subject in the given term.

7 **Median RIT:** The group's middle score for the subject in the given term if individual scores were ordered from lowest to highest.

8 **Standard deviation:** Indicates academic diversity of a group of students. The lower the number, the more students are alike (zero would mean all scores are the same). The higher the number, the greater the diversity in this group.

11 **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

16 **Area of relative strength:** Chosen relative to the whole subject score, plus the standard error.

17 **Suggested area of focus:** Chosen relative to the whole subject score, minus the standard error.

Tips and tricks

Compare student data across grades: The data in this column shows trends across school years for the same grade.

This report was pulled for fall 2019, but it shows the assessment scores for the same group of students during the fall, winter, and spring testing windows from the year before.

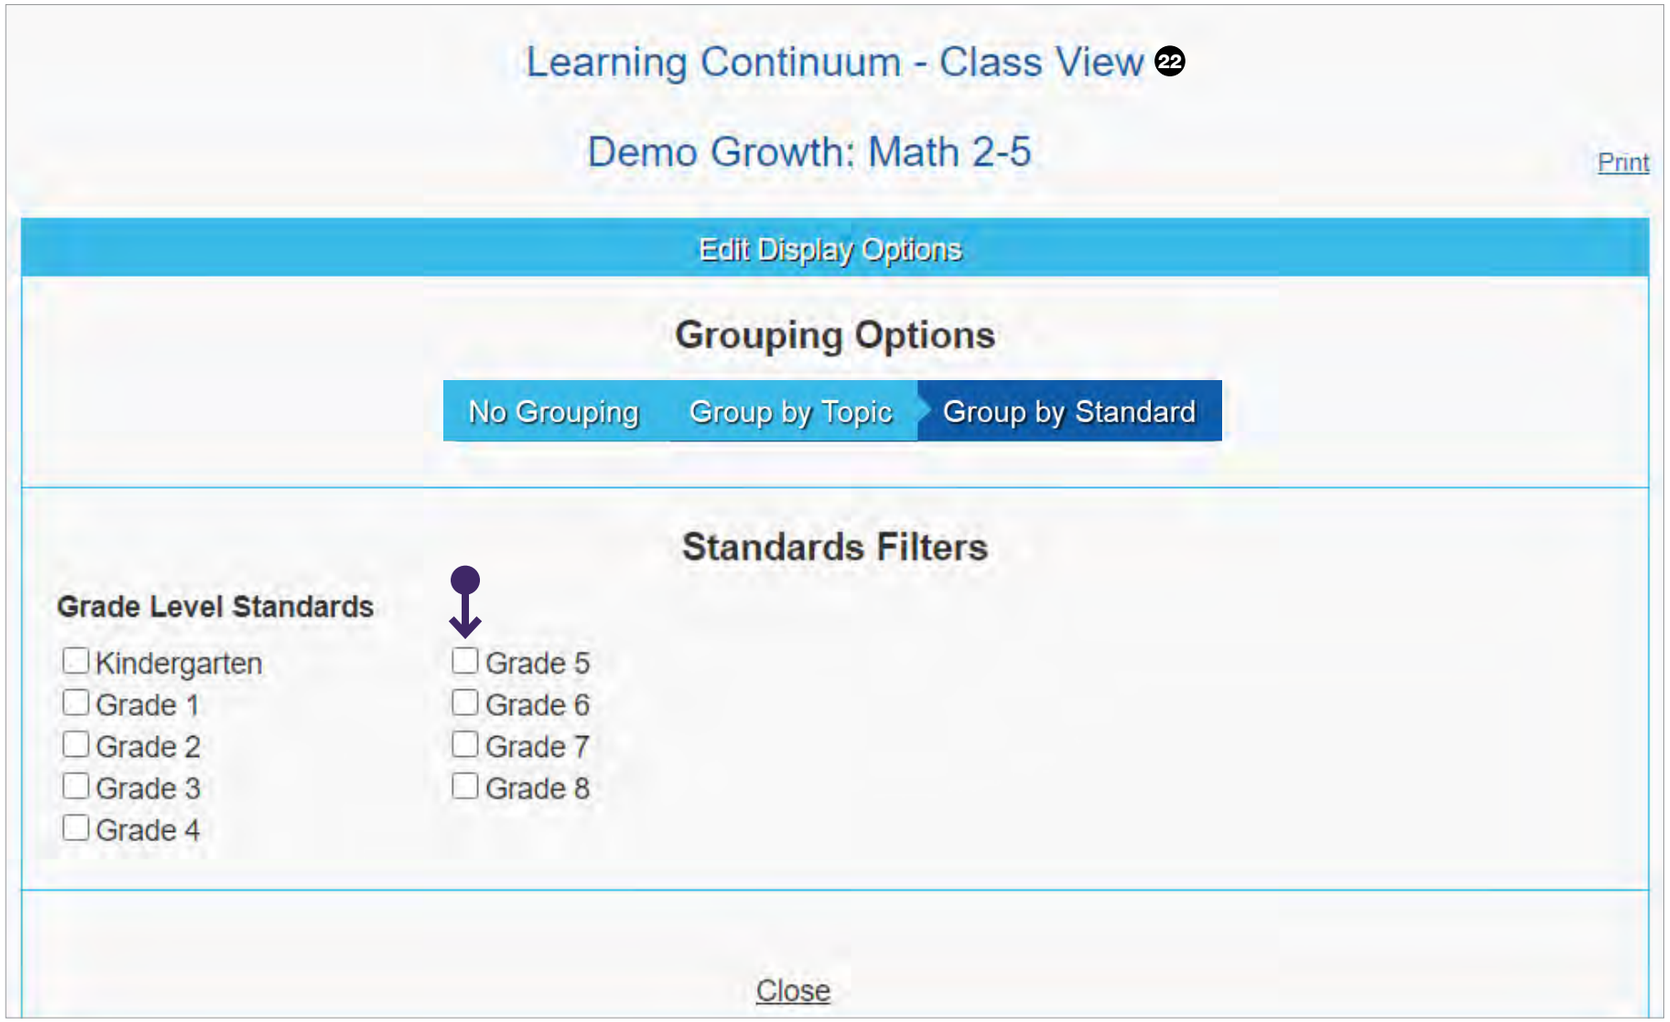
LEARNING CONTINUUM: DISPLAY OPTIONS

Learning Continuum

Display Options



22 **The Learning Continuum Test View report:** Shows skills and concepts to reinforce, develop, and introduce, based on 10-point RIT bands.

Tips and tricks

Standards filters: Grade Level Standards options can be selected if you choose Group by Standards for your grouping option; they don't apply if you choose Group by Topic.

Instructor | Administrator | School Coordinator | District Coordinator

LEARNING CONTINUUM: TEST VIEW, GROUPED BY STANDARD

Learning Continuum: Test View—Key Information

What this report offers

- Skills and concepts for all RIT bands, independent of any student data
- Information organized by 10-point RIT bands

Questions it helps answer

- How does this information compare to the grade-level-based instruction I am planning?
- What adjustments might I need to make for my students?
- How might this information support activities such as intervention or targeted instruction time?
- How can I find entry points for all students to support their success or further development with grade-level standards?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

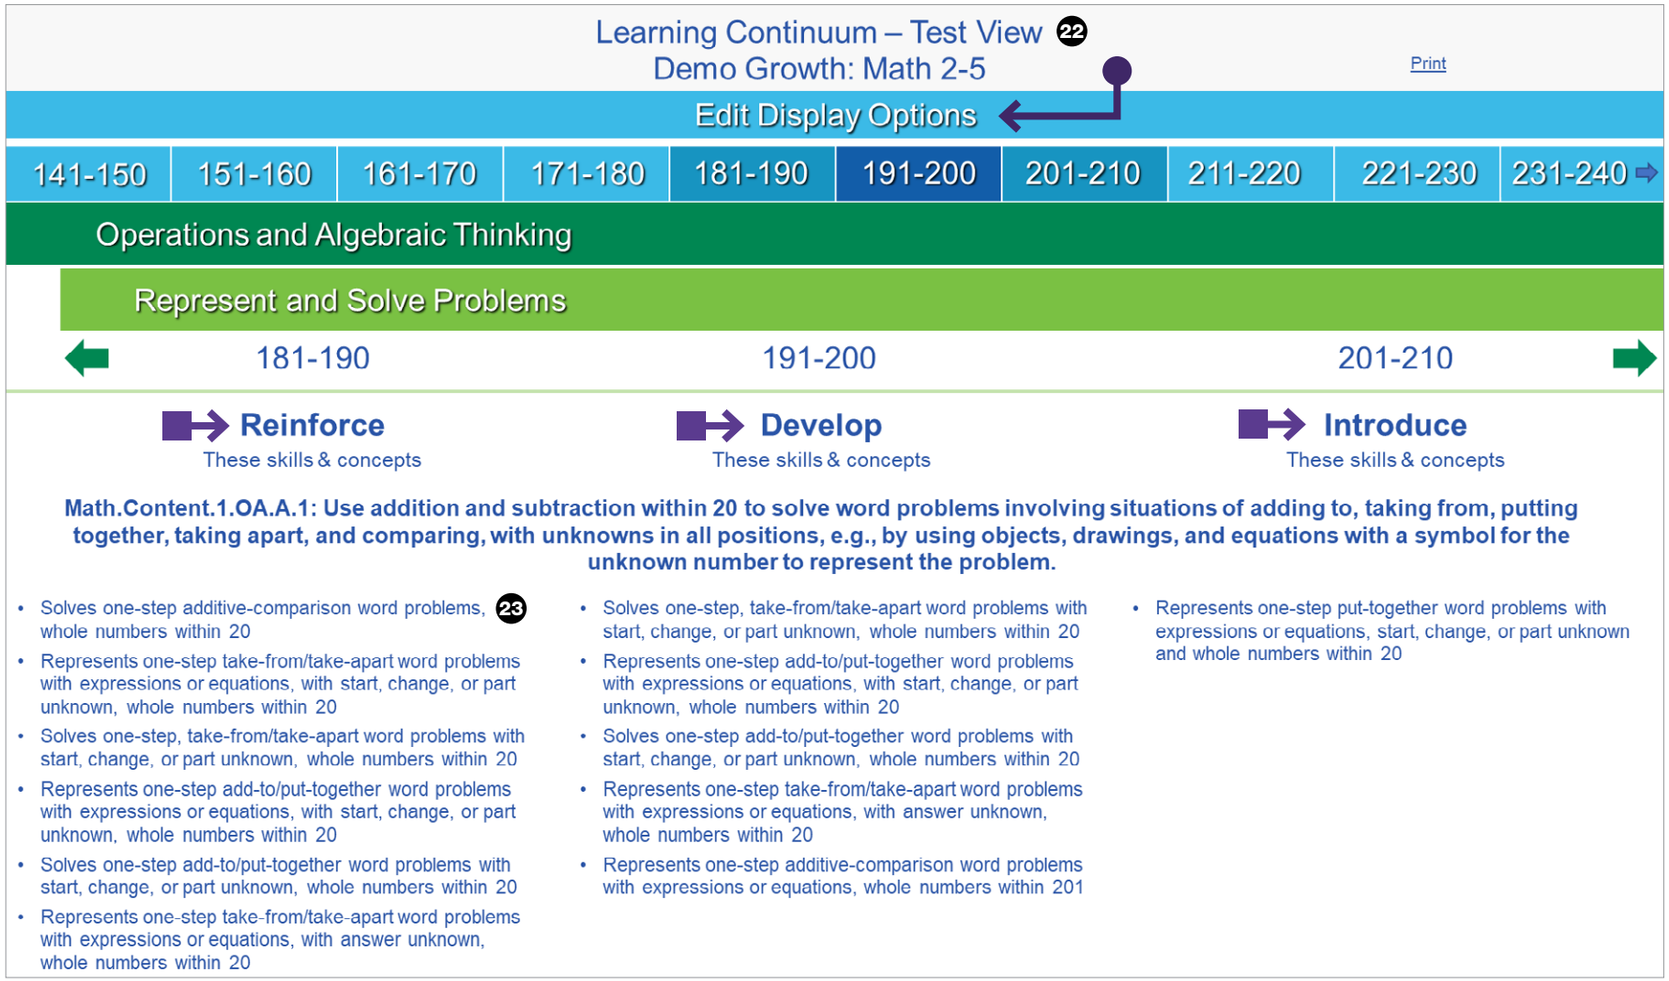
Things to consider

- Report organizes each test's learning statements by RIT band into three columns: introduce, develop, and reinforce
- Learning statements found throughout the Learning Continuum are instruction-oriented statements that describe the concepts and skills assessed by MAP Growth
- When choosing how to display the learning statements, you can select specific grades only if you select the Group by Standard view
- CTRL-F (Command-F on a Mac) is an easy way to search for specific standards or topics

Notes

Learning Continuum: Test View

Math, Grouped by Standard



22 **The Learning Continuum Test View report:** Shows skills and concepts to reinforce, develop, and introduce, based on 10-point RIT bands.

23 **Learning statements:** Statements that define learning objectives to help guide instruction.

Tips and tricks

Grouping by Standard: To view the Learning Continuum in this format, make sure you select Group by Standard in your display options.

Reinforce, Develop and Introduce: You will only see the descriptors Reinforce, Develop and Introduce on the Test View of the Learning Continuum. Develop indicates the students Zone of Proximal Development, where they are likely ready to learn.

Note: This image has been modified slightly to fit this the page.

LEARNING CONTINUUM: CLASS VIEW, GROUPED BY STANDARD

Learning Continuum: Class View—Key Information

What this report offers

- Student-level data that shows skills and concepts likely in each student's zone of proximal development (ZPD) based on their instructional area scores

Questions it helps answer

- How does this information compare to the lesson I plan to present?
- What adjustments might I need to make for my students?
- How can I leverage small-group instruction for students at similar readiness levels?
- How can I find entry points for all students to support their success or further development with grade-level standards?
- Coaches/administrators: What support do my teachers need to write effective differentiated lesson plans?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- When you want to use data to inform student grouping

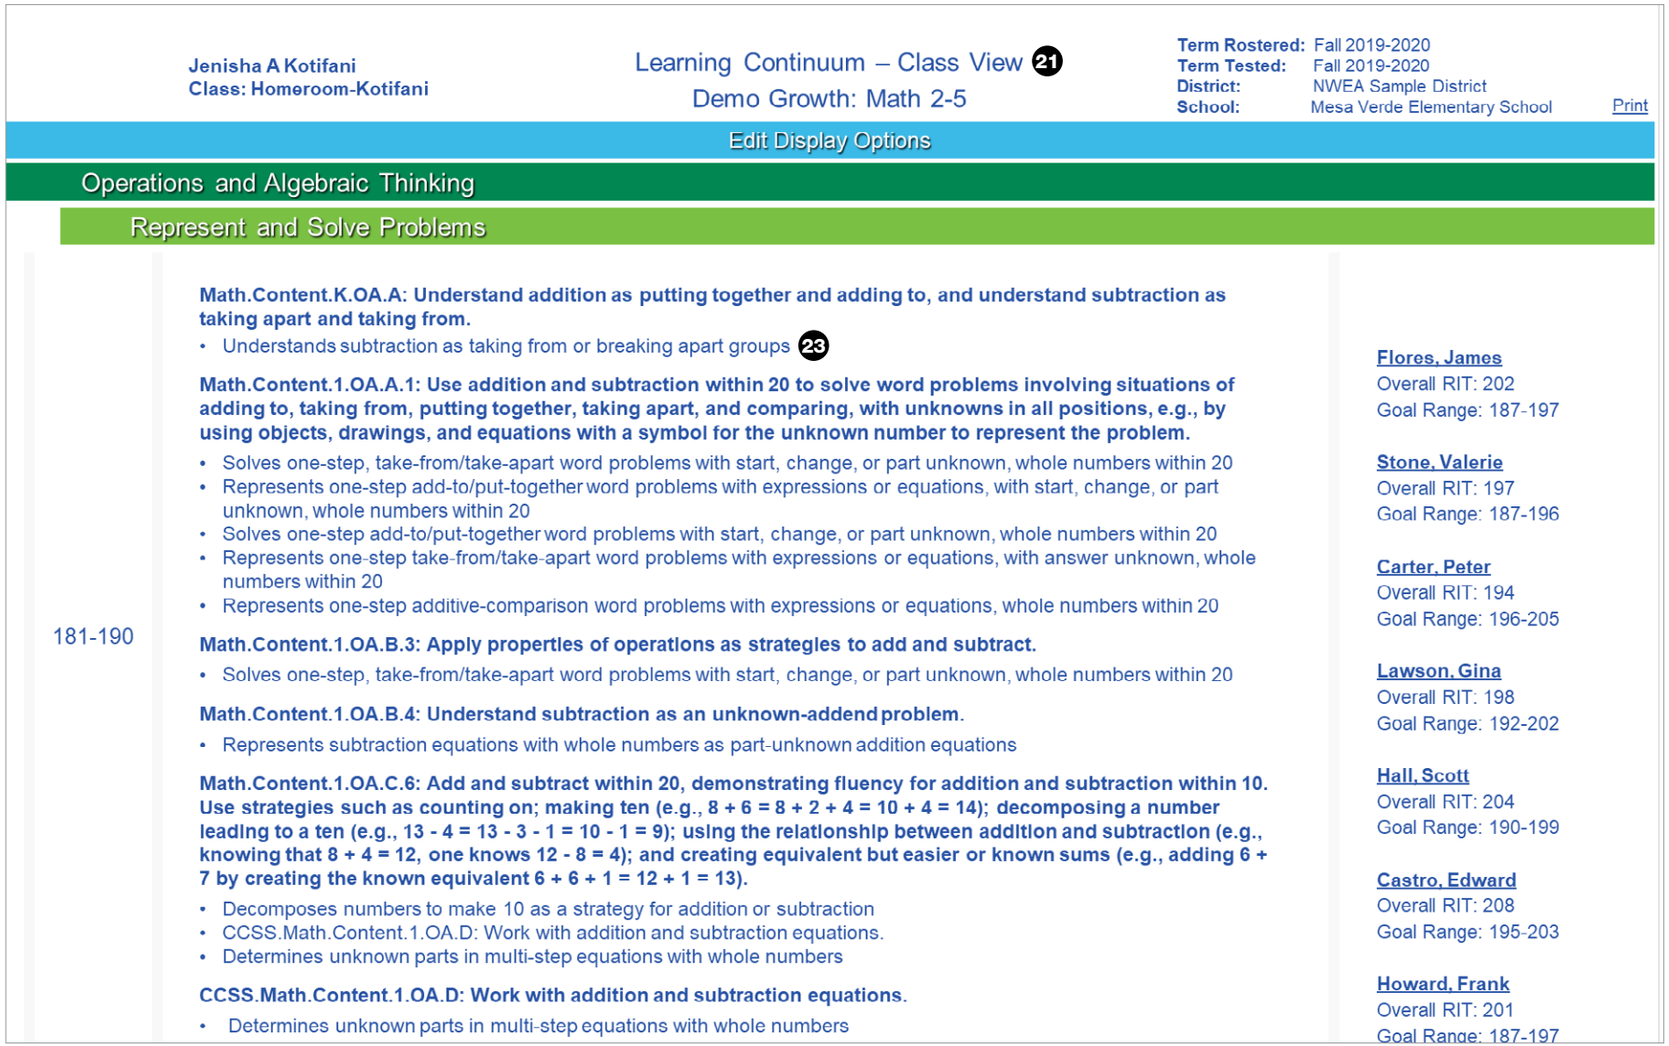
Things to consider

- The learning statements that appear with student names represent only some of the skills and concepts that support a standard or topic
- Learning statements found throughout the Learning Continuum are instruction-oriented statements that describe the concepts and skills assessed by MAP Growth
- When choosing how to display the learning statements, you can select specific grades only if you select the Group by Standard view
- Learning statements should not be the only source of information that a teacher consults
- CTRL-F (Command-F on a Mac) is an easy way to search for specific students, standards, or topics

Notes

Learning Continuum: Class View

Math, Grouped by Standard



Note: This image has been modified slightly to fit this page.

21 **The Learning Continuum Class View report:** Shows skills and concepts to develop with groups of students, based on 10-point RIT score bands indicating what they are likely ready to learn.

23 **Learning statements:** Statements that define learning objectives to help guide instruction.

Tips and tricks

The learning statements aligned to where the student is scoring indicate skills that represent the students Zone of Proximal Development, where the students is likely ready to learn. This is represented with the descriptor "Develop" on the Class View of the Learning Continuum.

21 **The Learning Continuum Class View report:** Shows skills and concepts to develop with groups of students, based on 10-point RIT score bands indicating what they are likely ready to learn.

23 **Learning statements:** Statements that define learning objectives to help guide instruction.

Tips and tricks

10-point RIT score range: Students are placed in the Learning Continuum according to their instructional area RIT score, not their overall RIT score.

The learning statements aligned to where the student is scoring indicate skills that represent the students Zone of Proximal Development, where the students is likely ready to learn. This is represented with the descriptor "Develop" on the Class View of the Learning Continuum.

ACHIEVEMENT STATUS AND GROWTH PROJECTION

Achievement Status and Growth Projection Report—Key Information

What this report offers

- Class-level growth projections based on starting RIT score
- Information organized by class and subject, sorted alphabetically by students' last names

Questions it helps answer

- What is the projected growth (number of RIT points) for my students based on their starting RIT score?
- How might this information support goal setting with students?
- How might this information factor into academic plans for my students?

When to use it

- After testing, to see results
- As part of the instructional decision-making process

Things to consider

- Report can access data for the current year of testing and two years prior
- It will not include data from outside of your test window
- Growth projections reflect the "typical" or 50th percentile for growth based on grade, subject, comparison period, and starting RIT
- Growth projections provided are not intended to be set as goals for students; teachers have discretion on deciding this
- This report can be exported to a spreadsheet

1 Norms reference data: Indicates which NWEA norming study your report data draws upon.

2 Growth comparison period: The two terms for which you wish to receive student growth data.

3 Weeks of instruction: The number of instructional weeks before testing, as set by your school or district administrator.

4 Optional grouping: You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.

5 Small group display: Summary groups of fewer than 10 students will display when you select this option while generating reports.

13 RIT score range: A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

25 Projected RIT score or RIT projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

26 Projected growth, growth projection, or typical growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

ACHIEVEMENT STATUS AND GROWTH SUMMARY

Achievement Status and Growth Summary Report—Key Information

What this report offers

- Class-level growth summary data based on two test windows
- Information organized by class and subject, sorted alphabetically by students' last names

Questions it helps answer

- Which of my students are growing above typical and which ones are not?
- What might be contributing to high growth? What's working?
- What might be contributing to low growth? What adjustments might be needed?
- What percentage of my class met or exceeded the growth projections?

When to use it

- After two test events, to see growth data
- As part of the instructional decision-making process

Things to consider

- Report can access data for the current year of testing and two years prior
- It will not include data from outside of your test window
- Class-level growth data appears in the summary section on the last page of the report
- This report can be exported to a spreadsheet

Explanatory Notes

** Due to statistical unreliability, summary data for groups of less than 10 are not shown. If Small Group Display is selected, summaries for small groups will be displayed.

† SE on Observed Growth is greater than normal. Use metric with caution.
* SE or SEM greater than normal. Use metric with caution.
‡Indicates that projected growth falls within standard error of observed growth.
Click here for more information on Met Projected Growth.

Instructor | Administrator | School Coordinator | District Coordinator

13 RIT score range: A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

25 Projected RIT score or RIT projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

26 Projected growth, growth projection, or typical growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

27 Observed growth or RIT growth: The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

28 Observed growth standard error: Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth, plus or minus the standard error.

29 Growth index: The difference between observed and projected growth. A zero indicates the student met projection exactly. Do not use this index to compare performance between students; use the conditional growth index (see annotation 31) instead.

30 Met projected growth: Indicates Yes if the student's term-to-term growth equaled or exceeded the growth projection and No if growth was less than projected. A ‡ means that the difference between the student's observed and projected growth is less than the observed growth standard error.

31 Conditional growth index: This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction before testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

32 Conditional growth percentile: The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

Summary for: Mathematics

Percentage of Students who Met or Exceeded their Projected RIT	37.0%	33
Percent of Projected Growth Met	49.3%	34
Count of Students with Growth Projection Available and Valid Beginning and Ending Term Scores	27	18
Count of Students who Met or Exceeded their Projected RIT	10	36
Median Conditional Growth Percentile	31	37

18 **Number of students with growth projection:** The number of students in the growth count population with available growth projections.

33 **Percentage of students who met growth projection:** The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.

34 **Percent of projected growth met:** The total student growth divided by the total projected RITs, expressed as a percentage. Performance of 100% is considered average, meaning the overall student growth equaled the projections. Use in conjunction with annotation 33.

36 **Number of students who met their growth projection:** The number of students whose end-term RIT scores met or exceeded their individual growth projections.

37 **Median conditional growth percentile:** The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.

Tips and tricks

Context for projected RIT: Nationally, about 50% of students will meet or exceed their projected RIT.

Instructor | Administrator | School Coordinator | District Coordinator

ACHIEVEMENT STATUS AND GROWTH SUMMARY WITH QUADRANT CHART

Achievement Status and Growth Quadrant Chart—Key Information

What this report offers

- Class-level growth summary data based on two test windows
- Data can be sorted by subject, gender, and ethnicity

Questions it helps answer

- Which of my students are growing above typical and which ones are not?
- What might be contributing to high growth? What's working?
- What might be contributing to low growth? What adjustments might be needed?
- What percentage of my class met or exceeded the growth projections?

When to use it

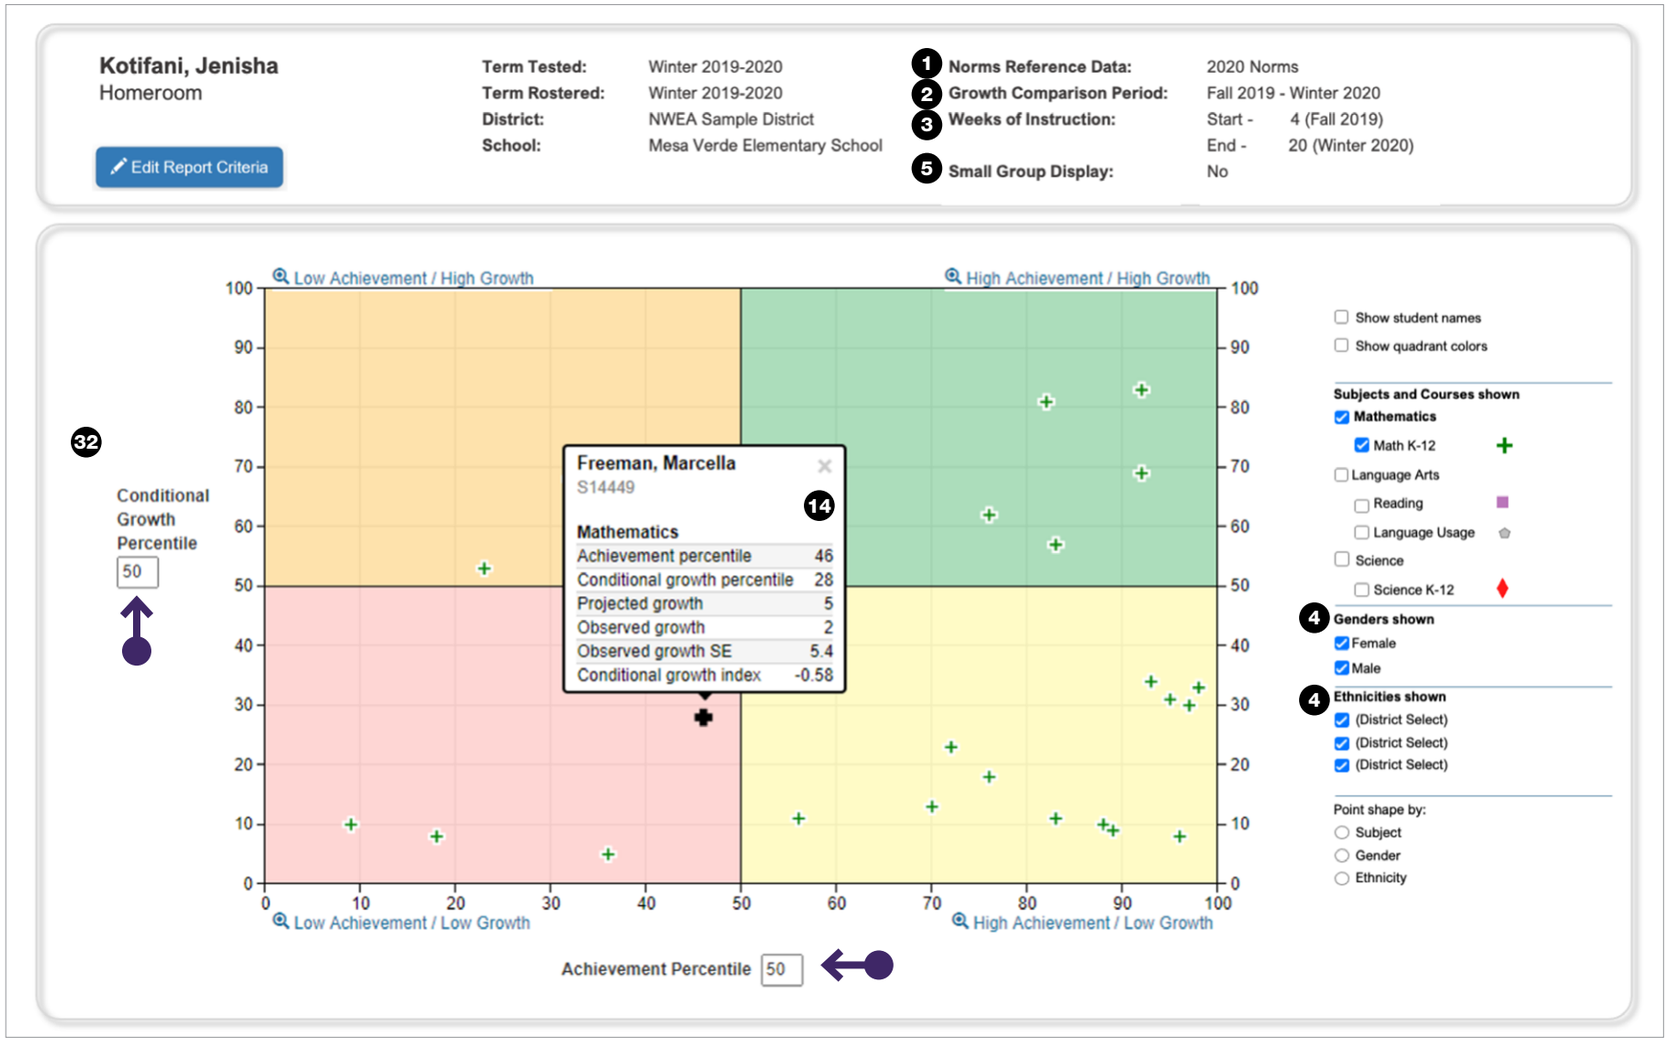
- After two test events, to see growth data
- As part of the instructional decision-making process

Things to consider

- Report can access data for the current year of testing and two years prior
- It will not include data from outside of your test window
- Class-level growth data appears in the summary section on the bottom
- This report can be exported to a spreadsheet

Notes

Achievement Status and Growth Summary with Quadrant Chart
(1 of 2)



1 **Norms reference data:** Indicates which NWEA norming study your report data draws upon.

2 **Growth comparison period:** The two terms for which you wish to receive student growth data.

3 **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.

4 **Optional grouping:** You may choose to view results by gender or ethnicity. If your district submitted a program file, you may also view summary results by special program.

5 **Small group display:** Summary groups of fewer than 10 students will display when you select this option while generating reports.

14 **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

32 **Conditional growth percentile:** The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

Tips and tricks

Adjustable quadrants: You can change the numbers in these two boxes to define your own quadrants.

Instructor Administrator School Coordinator District Coordinator

13 RIT score range: A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

25 Projected RIT score or RIT projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

26 Projected growth, growth projection, or typical growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

27 Observed growth or RIT growth: The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

28 Observed growth standard error: Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth, plus or minus the standard error.

29 Growth index: The difference between observed and projected growth. A zero indicates the student met projection exactly. Do not use this index to compare performance between students; use the conditional growth index (see annotation 31) instead.

30 Met projected growth: Indicates Yes if the student's term-to-term growth equaled or exceeded the growth projection and No if growth was less than projected. A ‡ means that the difference between the student's observed and projected growth is less than the observed growth standard error.

31 Conditional growth index: This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction before testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

32 Conditional growth percentile: The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

Tips and tricks

Color coding: The color next to the student's name helps you identify what quadrant they are in.

STUDENT GROWTH SUMMARY

Student Growth Summary Report—Key Information

What this report offers

- School- or district-level growth summary data based on two test windows and compared to the national norms
- Information organized by school and subject

Questions it helps answer

- How does growth in each grade compare to other schools?
- Which grade levels are growing above typical and which ones are not?
- What are trends over time with student growth?
- How might this information support school improvement planning and/or goal setting?

When to use it

- After two test events, to see growth data
- As part of the instructional decision-making process
- When preparing data for activities such as school improvement planning or board meetings

Things to consider

- Report can access data for all prior years of testing
- It will not include data from outside of your test window
- The Test Window Complete checkbox must be selected for this report to populate with current data
- This report can be aggregated for a school or for the entire district
- Administrators can only order reports that contain data for their schools
- Optional grouping organizes and calculates results by gender, ethnicity, or program; this grouping is coupled with the aggregation chosen (school or district)

Notes

Explanatory Notes
[1]User norms are based on the group of students who have taken the test in the selected subject and course. These results are not comparable to results based on nationally representative norms.
** Calculations not provided because students have no MAP results in at least one of the terms. The Growth Count is zero.
‡Growth Count provided reflects students with MAP results in both the Start and End terms. Observed Growth calculation is based on that student data.

Instructor | Administrator | School Coordinator | District Coordinator

6 Mean RIT score: The group's average score for the subject in the given term.

8 Standard deviation: Indicates academic diversity of a group of students. The lower the number, the more students are alike (zero would mean all scores are the same). The higher the number, the greater the diversity in this group.

14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

18 Number of students with growth projection: The number of students in the growth count population with available growth projections.

26 Projected growth, growth projection, or typical growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

27 Observed growth or RIT growth: The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

28 Observed growth standard error: Amount of measurement error associated with observed term-to-term growth. If the student could be tested again over the same period with comparable tests, there would be about a 68% chance that growth would fall within a range defined by the term-to-term growth, plus or minus the standard error.

33 Percentage of students who met growth projection: The percentage of students whose end-term RIT scores met or exceeded their individual growth projections.

35 Total number of growth events: The number of students with valid growth-based test events for both terms.

36 Number of students who met their growth projection: The number of students whose end-term RIT scores met or exceeded their individual growth projections.

37 Median conditional growth percentile: The middle value of this student group's conditional growth percentiles if the individuals' percentiles were ordered from smallest to largest.

38 School conditional growth index: This index allows for growth comparisons between grades within schools. It incorporates conditions that affect school growth, including weeks of instruction before testing and starting grade-level Mean RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

39 School conditional growth percentile: The school conditional growth index (see annotation 38) translated into national percentile rankings for growth.

STUDENT GOAL SETTING WORKSHEET

Student Goal Setting Worksheet—Key Information

What this report offers

- Student-level report showing test history and growth projections for a specific time period
- Information organized by subject
- Space to write out an action plan tied to goals

Questions it helps answer

- What goal might a student set for the next test window?
- What accomplishments can we celebrate?
- Are there any areas where students could benefit from additional support?
- How might this information support instructional plans for this student?

When to use it

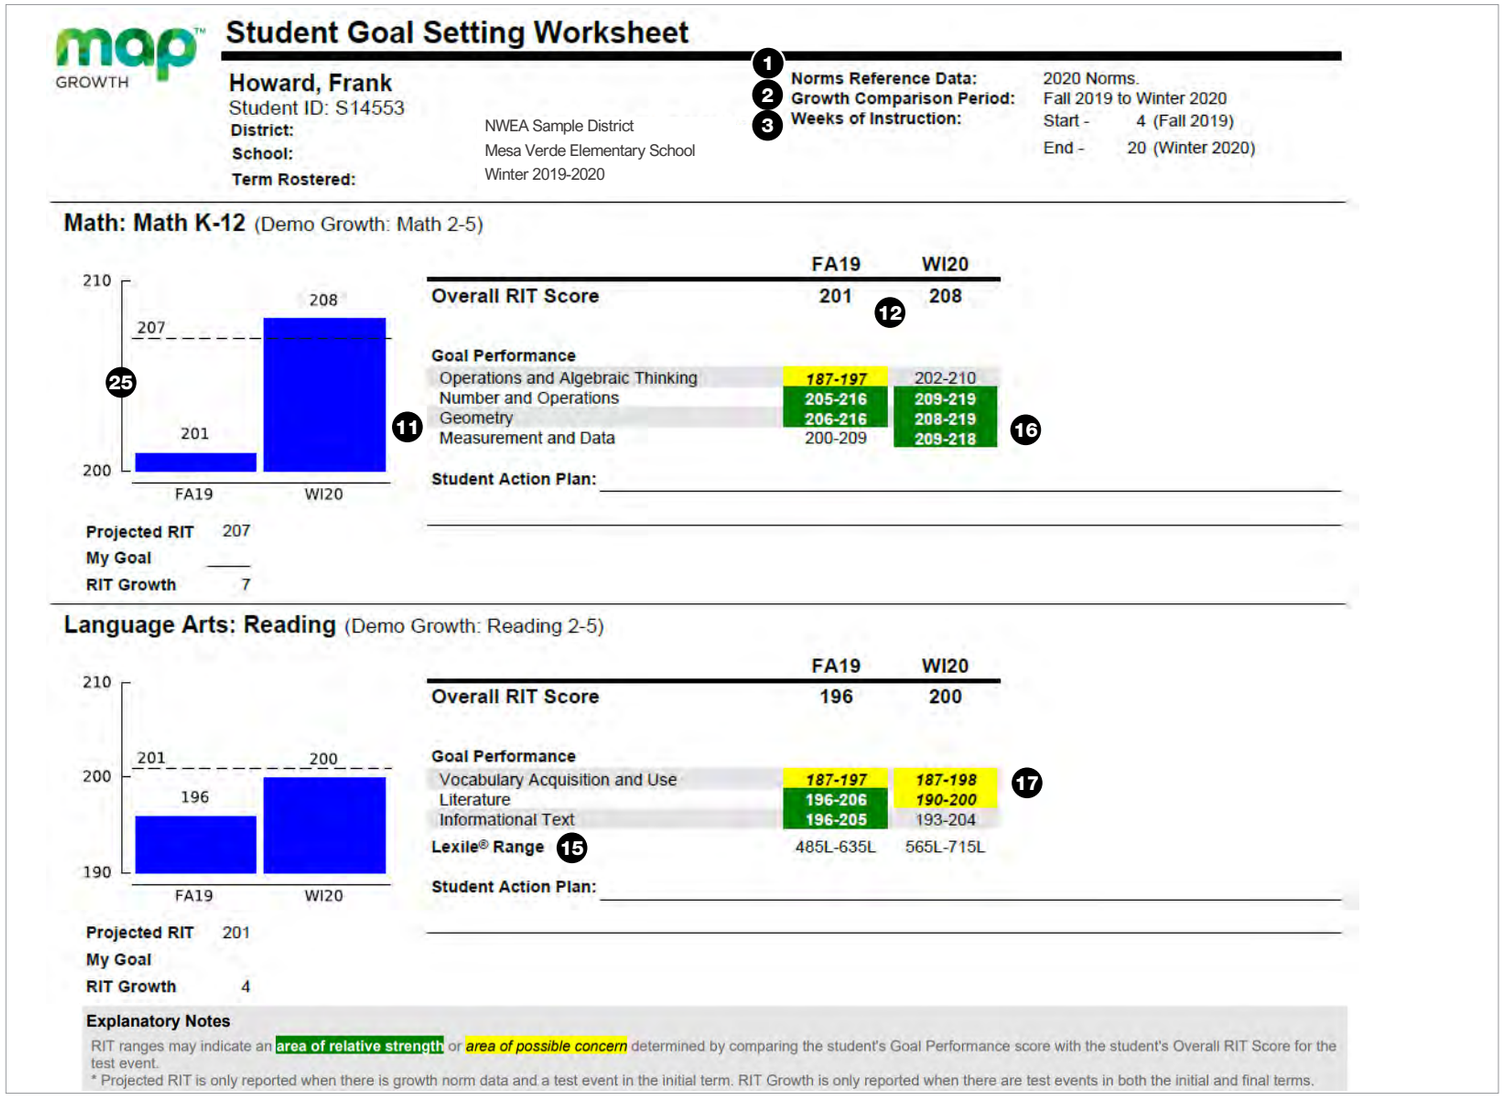
- After testing, to see results
- After two test events, to see growth data
- As part of the instructional decision-making process
- Anytime you need to talk to families or students about performance

Things to consider

- Report can access data for the current year of testing and two years prior
- It will not include data from outside of your test window
- Growth may span up to five terms
- Shows scores compared to the typical growth projection, which may or may not reflect the student's goal
- This report can be printed for one, some, or all students in a given class

Notes

Student Goal Setting Worksheet



Student Goal Setting Worksheet

Howard, Frank
Student ID: S14553
District: NWEA Sample District
School: Mesa Verde Elementary School
Term Rostered: Winter 2019-2020

1 **Norms Reference Data:** 2020 Norms.
2 **Growth Comparison Period:** Fall 2019 to Winter 2020
3 **Weeks of Instruction:** Start - 4 (Fall 2019)
End - 20 (Winter 2020)

Math: Math K-12 (Demo Growth: Math 2-5)

	FA19	WI20
Overall RIT Score	201 (12)	208
Goal Performance		
Operations and Algebraic Thinking	187-197	202-210
Number and Operations	205-216	209-219
Geometry (11)	206-216	208-219
Measurement and Data	200-209	209-218 (16)

Student Action Plan: _____

Projected RIT 207
My Goal ____

Lexile® Range (15)	485L-635L	565L-715L

Student Action Plan: _____

Projected RIT 201
My Goal
RIT Growth 4

Explanatory Notes

RIT ranges may indicate an area of relative strength or *area of possible concern* determined by comparing the student's Goal Performance score with the student's Overall RIT Score for the test event.
* Projected RIT is only reported when there is growth norm data and a test event in the initial term. RIT Growth is only reported when there are test events in both the initial and final terms.

1 **Norms reference data:** Indicates which NWEA norming study your report data draws upon.

2 **Growth comparison period:** The two terms for which you wish to receive student growth data.

3 **Weeks of instruction:** The number of instructional weeks before testing, as set by your school or district administrator.

11 **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

12 **RIT score:** A student's overall scale score on the test for a given subject.

15 **Lexile®/Lexile range:** Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

16 **Area of relative strength:** Chosen relative to the whole subject score, plus the standard error.

17 **Suggested area of focus:** Chosen relative to the whole subject score, minus the standard error.

25 **Projected RIT score or RIT projection:** The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

STUDENT PROGRESS REPORT

Student Progress Report—Key Information

What this report offers

- Student-level report showing a student's overall progress from all past terms to the selected term
- The student's growth from term to term

Questions it helps answer

- What goal might a student set for the next test window?
- What accomplishments can we celebrate?
- Are there any areas where students could benefit from additional support?
- How might this information support instructional plans for this student?

When to use it

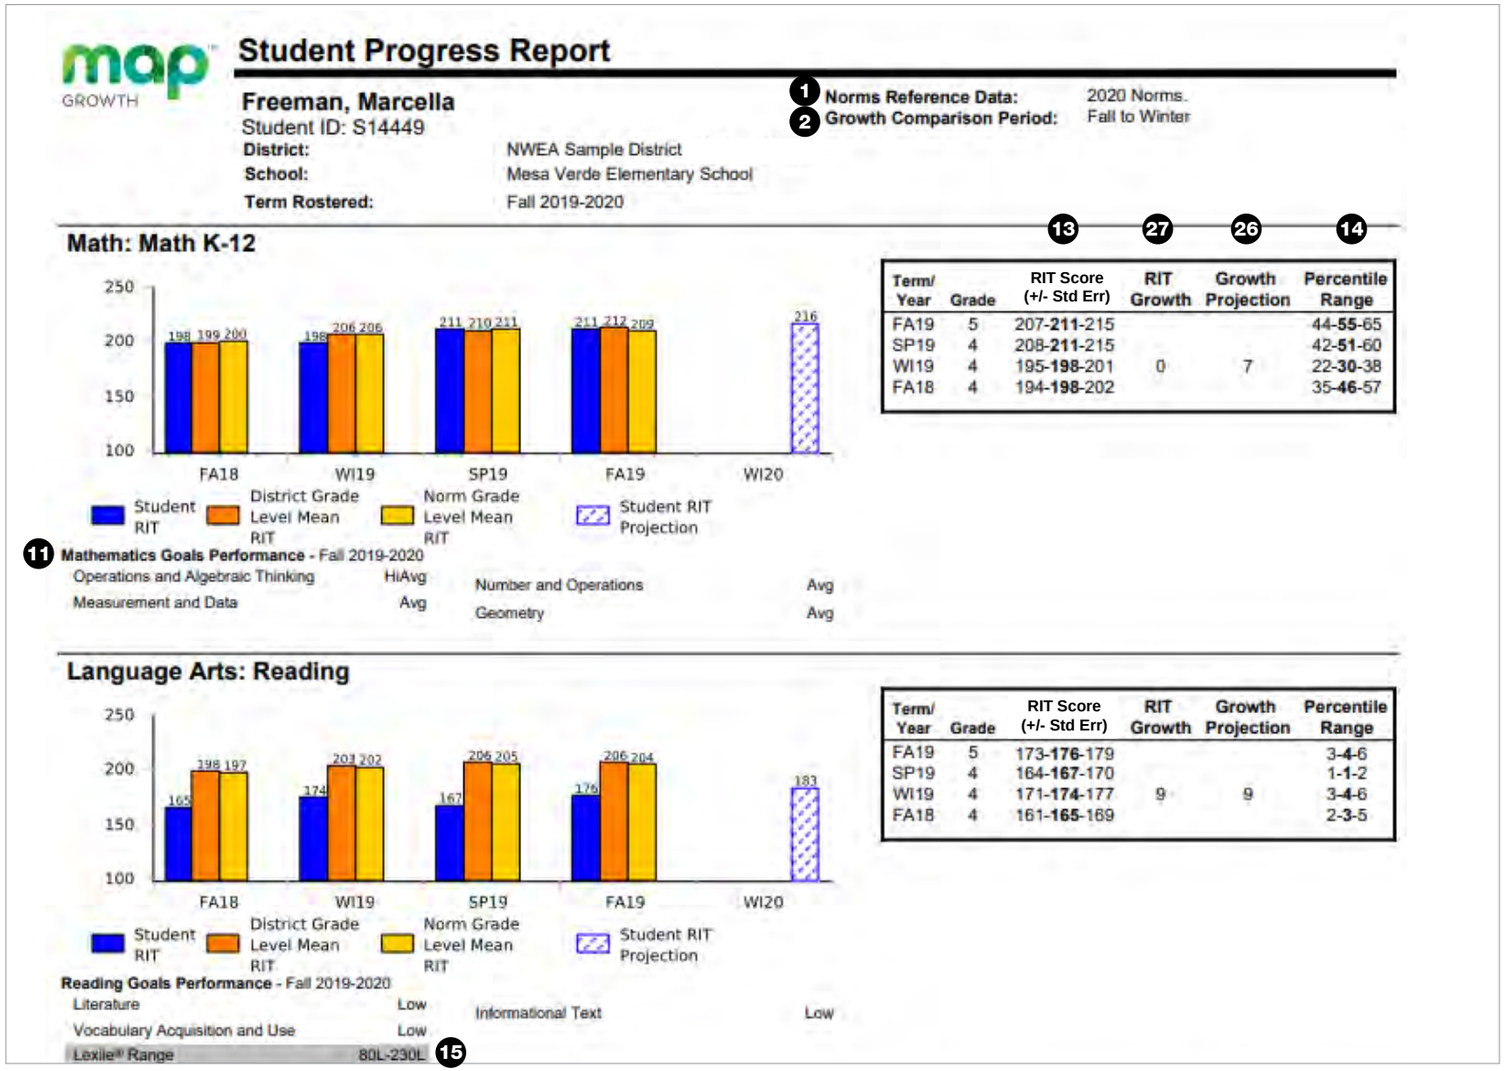
- After testing, to see results
- After two test events, to see growth data
- Anytime you need to talk to families or students about performance

Things to consider

- Report can access data for all prior years of testing
- It will include data from outside of your test window (displayed in gray, or low-lighted, text) if the All Valid Test Events report option is selected
- You can choose to display the student's overall RIT score compared to district grade-level means and/or the norm grade-level mean
- Can be displayed as either a bar chart or line graph
- This report can be printed for one, some, or all students in a given class
- Instructional area scores can be printed by descriptors (default) or RIT score ranges
- You can also print a quick-reference explanatory sheet

Notes

Student Progress Report



Note: You can view this report as a bar graph or a line graph. The bar graph shown here is the default setting.

1. **Norms reference data:** Indicates which NWEA norming study your report data draws upon.
2. **Growth comparison period:** The two terms for which you wish to receive student growth data.
11. **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.
13. **RIT score range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.
14. **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).
15. **Lexile®/Lexile range:** Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.
26. **Projected growth, growth projection, or typical growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.
27. **Observed growth or RIT growth:** The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

Instructor | Administrator | School Coordinator | District Coordinator

STUDENT PROFILE REPORT

Student Profile Report—Key Information

What this report offers

- Student-level report brings together all the data needed to advise each student and support their growth
- There is an area to calculate possible student goals based on growth projections and to document the action plan around that goal
- Shows all subjects tested for a student*, organized by term

*Course-specific test data will not be displayed for test events between July 24, 2020, and the MAP Growth software release in August 2021.

Questions it helps answer

- How do the growth percentile and achievement percentile compare for this student?
- Is this student on track? (State assessment, ACT, SAT)
- What are this student's relative strengths and suggested areas of focus?
- How can I leverage those relative strengths and suggested areas of focus to help this student?
- What is an appropriate growth goal for this student?
- How can I help this student set an appropriate stretch goal?
- What supports are needed to help reach the stretch goal?

When to use it

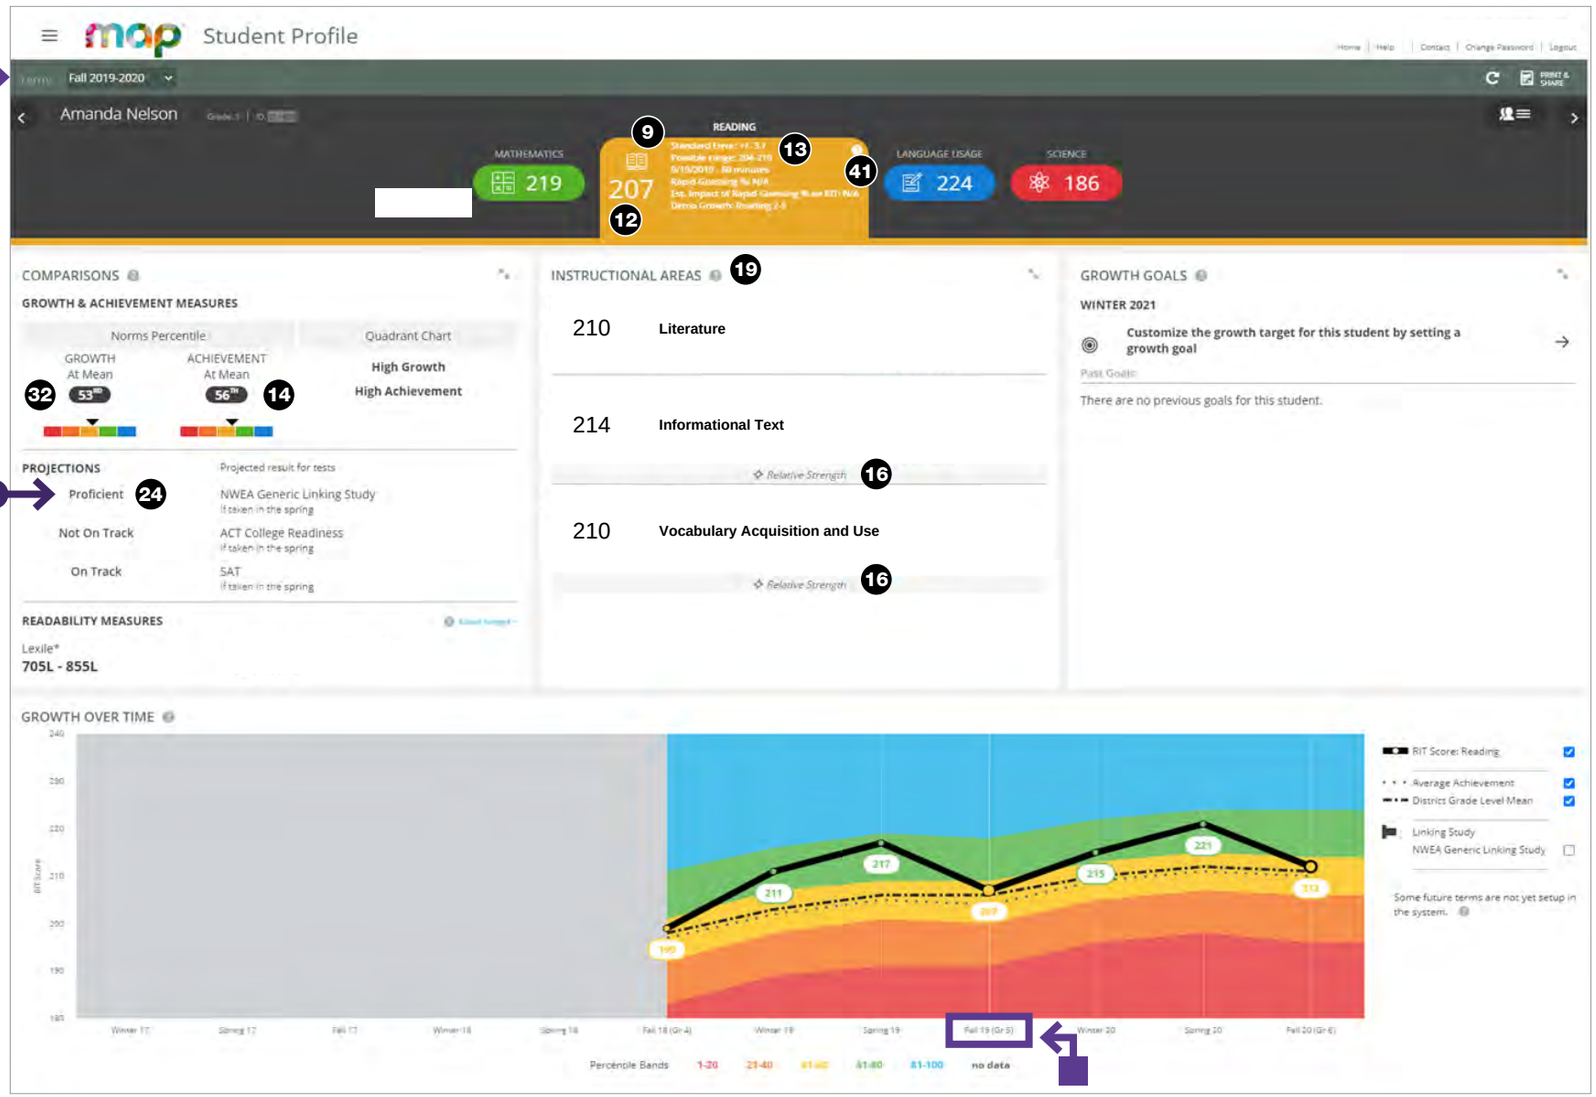
- After testing, to see results
- After two test events, to see growth data
- As part of the instructional decision-making process
- Anytime you need to talk to families or students about performance

Things to consider

- Report can access data for all prior years of testing
- It will not include data from outside of your test window
- This report can be printed for one, some, or all students in a given class via batch printing

Notes

Student Profile Report



Instructor | Administrator | School Coordinator | District Coordinator

9 **Standard error of measurement or error margin:** An estimate of the amount of error in an individual's observed achievement score. The smaller the standard error, the more precise the achievement estimate.

12 **RIT score:** A student's overall scale score on the test for a given subject.

13 **RIT score range:** A range of RIT scores defined by the student's RIT score plus and minus one standard error of measurement. If the student took the test again relatively soon, you could expect their score to fall within this range about 68% of the time.

14 **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

16 17 **Area of relative strength OR suggested area of focus:** Chosen relative to the whole subject score, plus or minus the standard error. Both of these items are highlighted within the Instructional Areas segment of this report.

19 **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

24 **Projected proficiency category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP Growth RIT scale to state assessments and college and career readiness measures.

32 **Conditional growth percentile:** The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

41 **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Tips and tricks

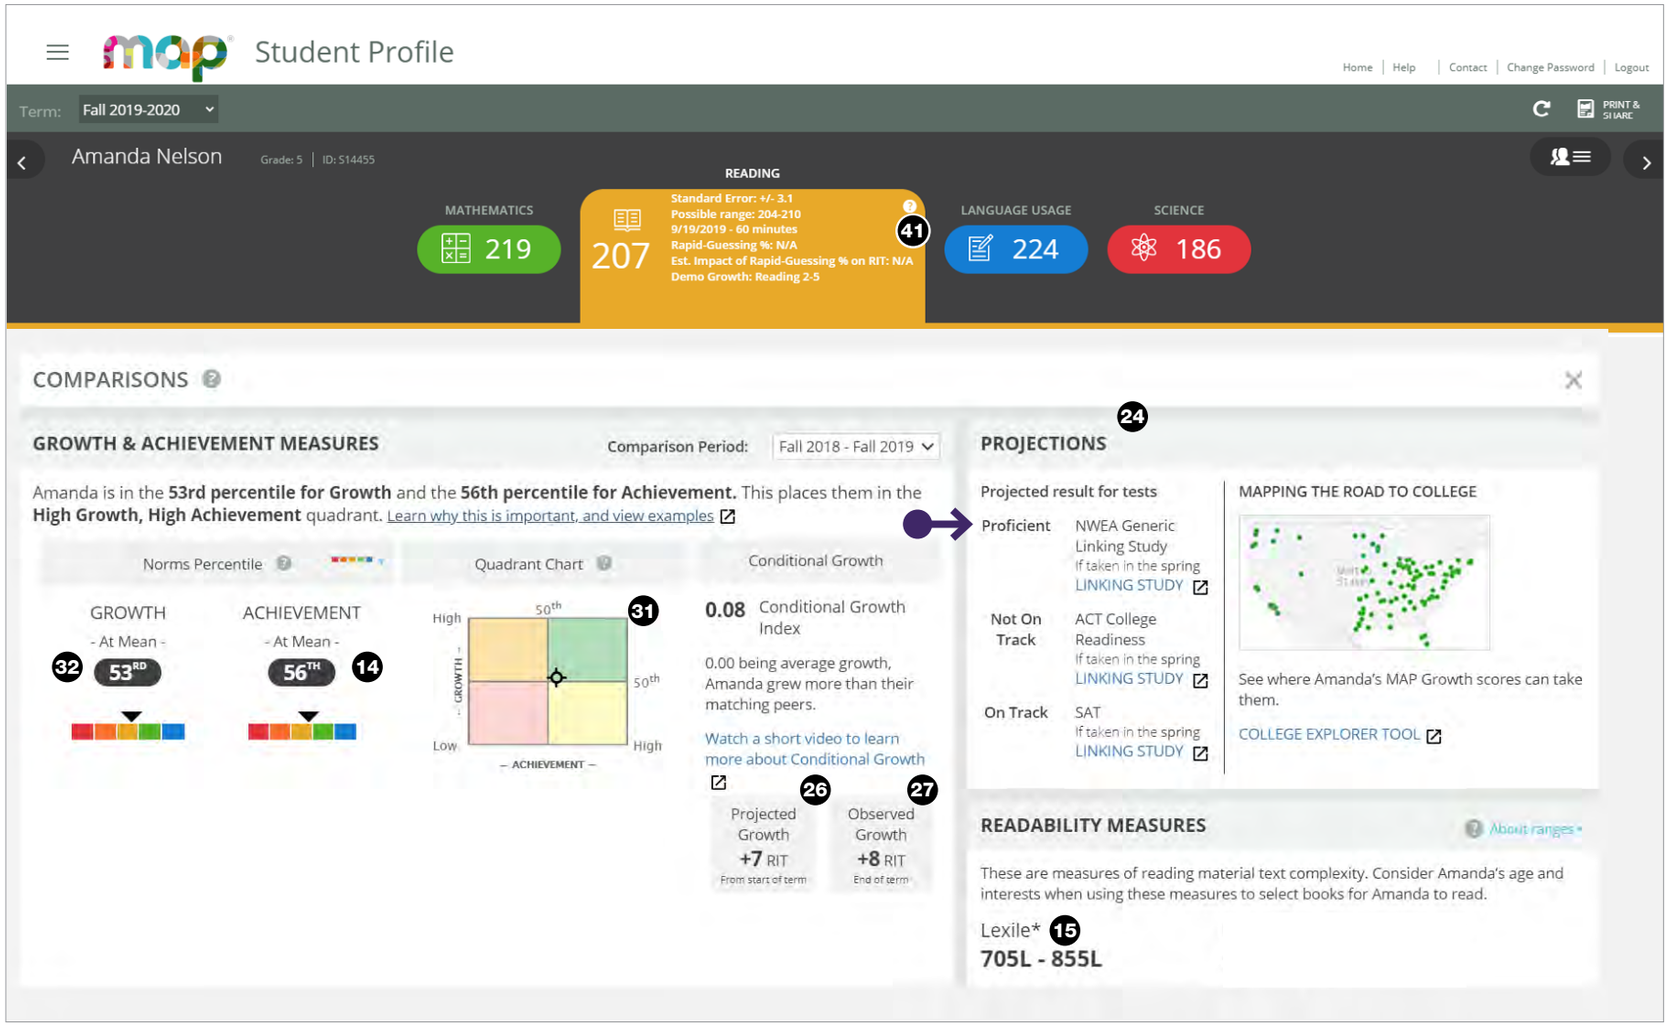
Categories of proficiency: In this area, you will see your state's specific categories of proficiency.

Term Selection: Use this drop-down menu to select the test event you want to review. In this example, we are looking at a test event from 2019. This means that the Growth Over Time section displays RIT scores for future test events.

STUDENT PROFILE REPORT: COMPARISONS

Student Profile Report

Comparisons



14 **Percentile:** The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

15 **Lexile®/Lexile range:** Lexile reading range is the range of texts a student is likely to comprehend when reading independently. The student may require increased instructional support to comprehend text at higher ranges.

24 **Projected proficiency category:** Students are grouped in predicted proficiency categories based on NWEA linking studies that align the MAP Growth RIT scale to state assessments and college and career readiness measures.

26 **Projected growth, growth projection, or typical growth:** The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

27 **Observed growth or RIT growth:** The change in a student's RIT score during the growth comparison period. On the Student Growth Summary report, observed growth is the end-term mean RIT minus the start-term mean RIT.

31 **Conditional growth index:** This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction before testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

32 **Conditional growth percentile:** The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

41 **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Tips and tricks

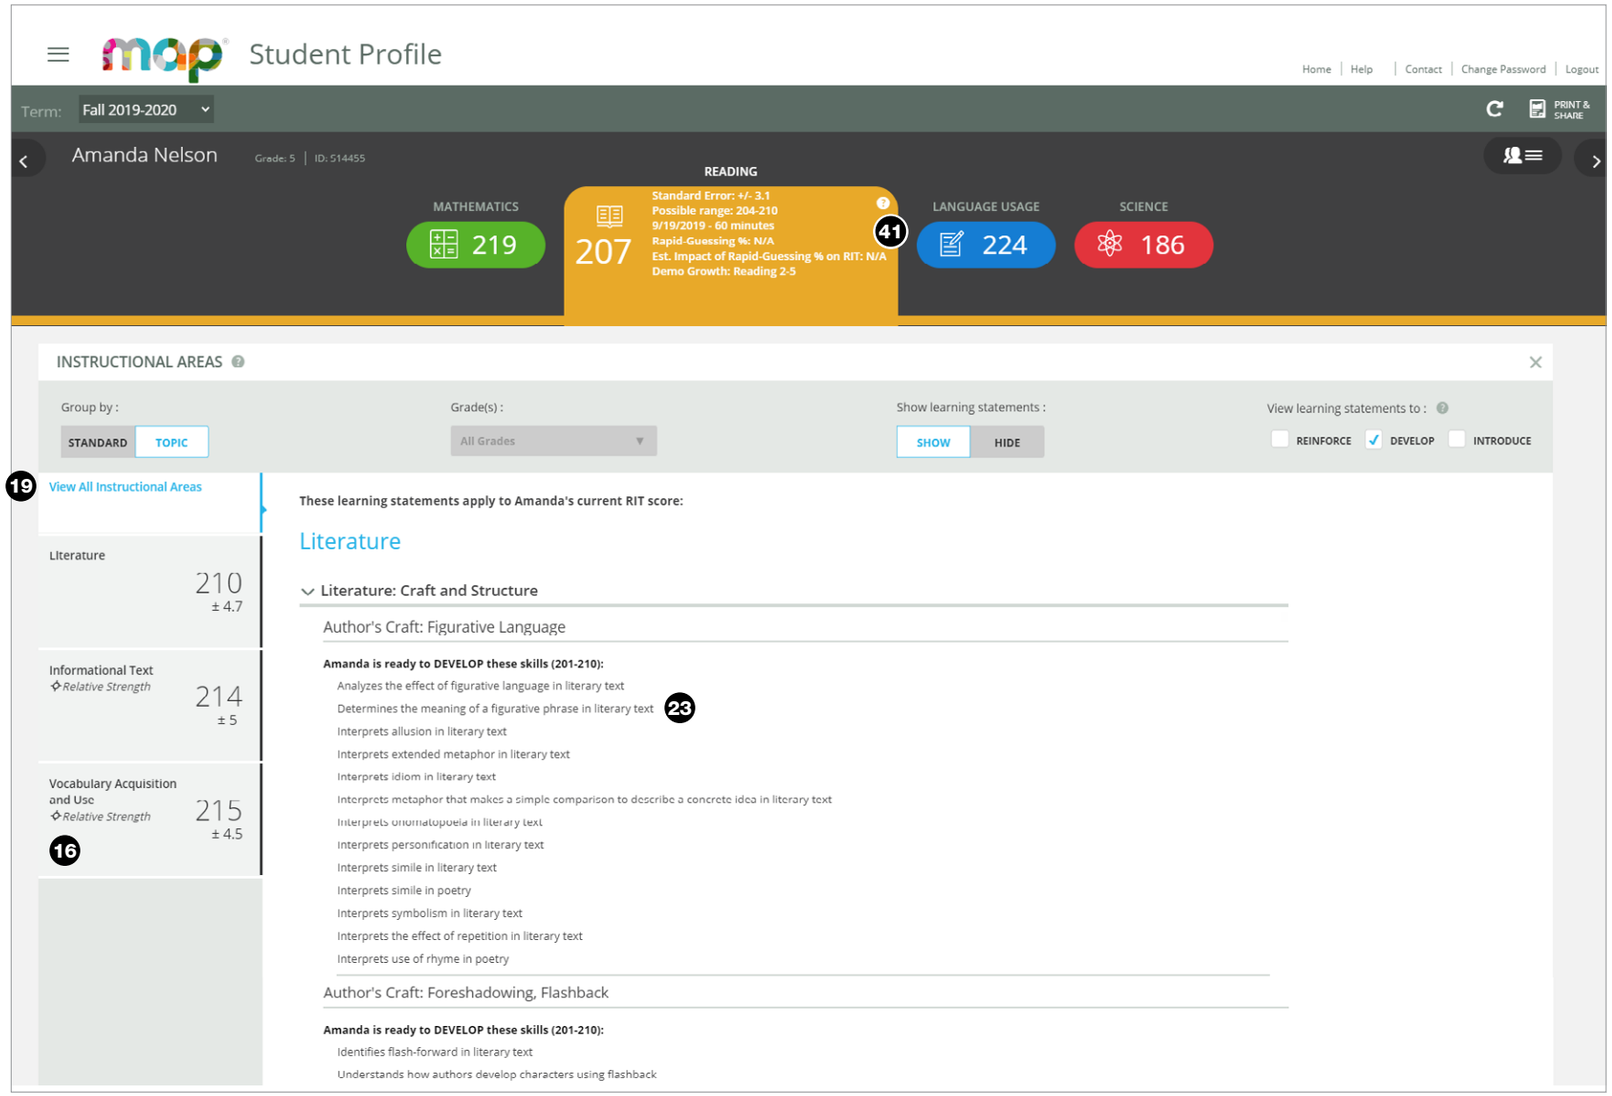
Categories of proficiency: In this area, you will see your state's specific categories of proficiency.

Instructor | Administrator | School Coordinator | District Coordinator

STUDENT PROFILE REPORT: INSTRUCTIONAL AREAS

Student Profile Report

Instructional Areas



16 **Area of relative strength:** Chosen relative to the whole subject score, plus the standard error.

19 **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

23 **Learning statements:** Statements that define learning objectives to help guide instruction.

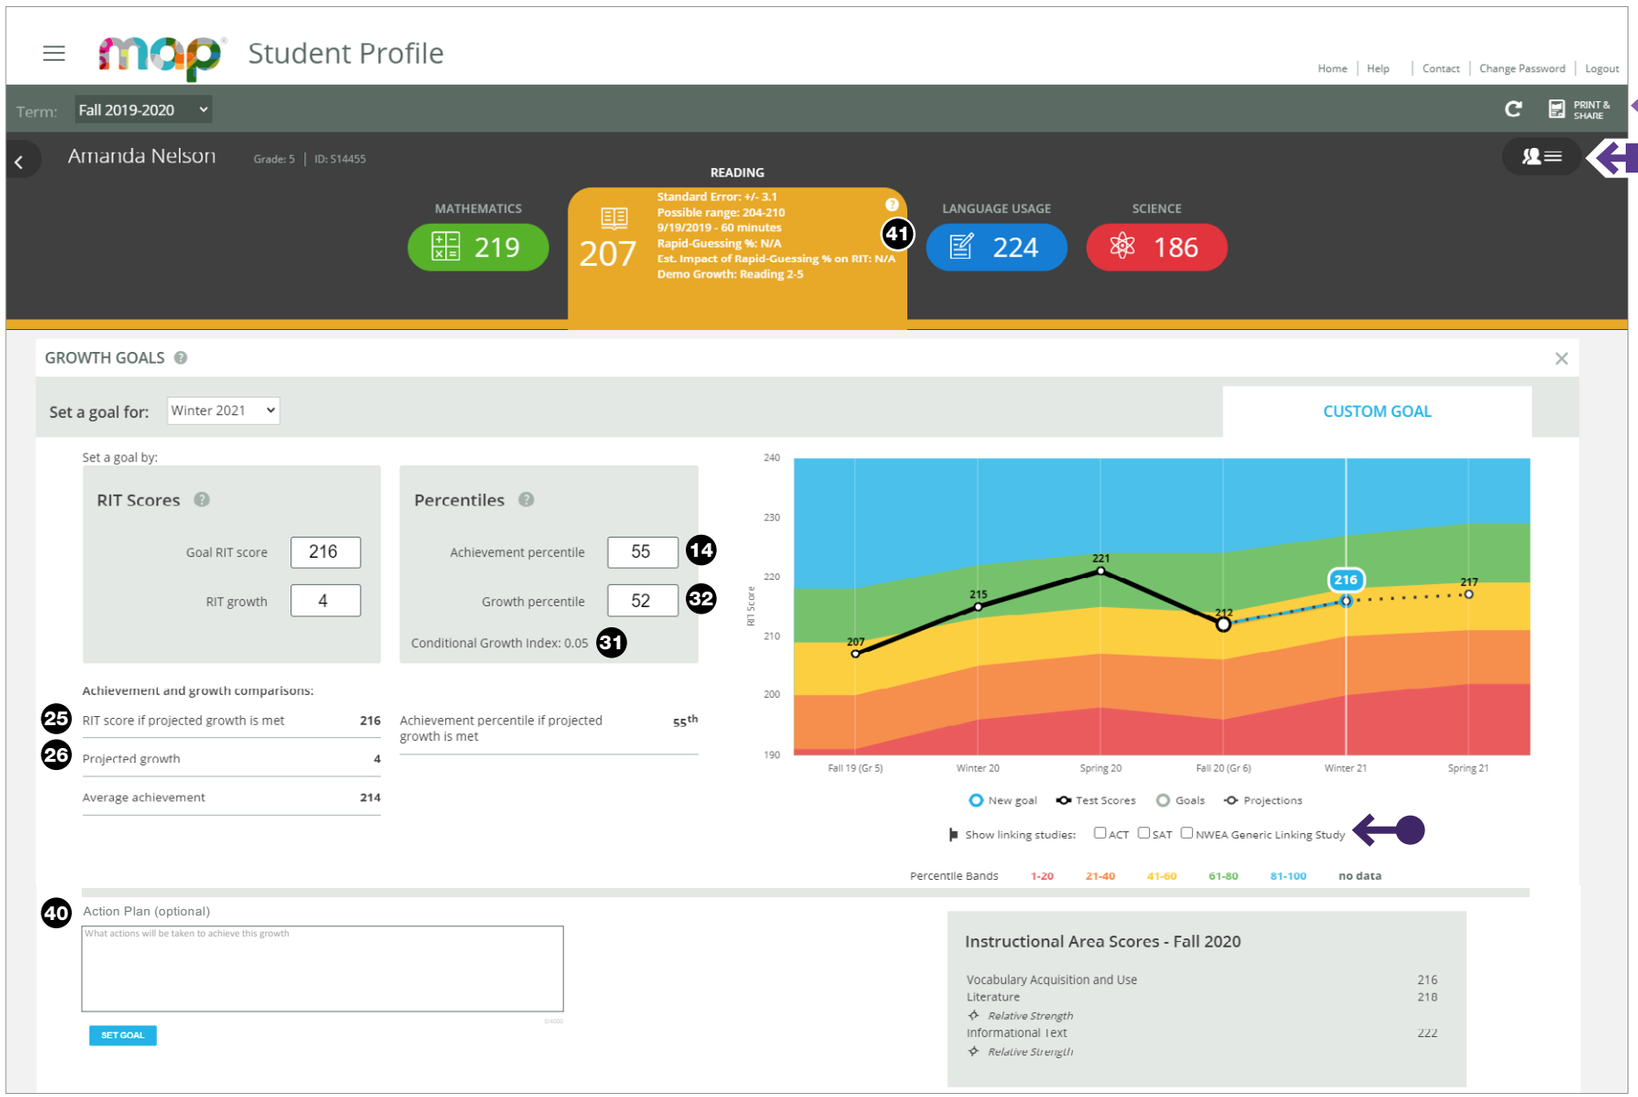
41 **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Instructor | Administrator | School Coordinator | District Coordinator

STUDENT PROFILE REPORT: GROWTH GOALS

Student Profile Report

Growth Goals



14 Percentile: The percentage of students in the NWEA national norm sample for a grade and subject area that a given student's score (or group of students' mean score) equaled or exceeded. Percentile range is computed by identifying the percentile ranks of the low and high ends of the RIT score range (see annotation 13).

25 Projected RIT score or RIT projection: The predicted future score for a student who makes typical growth, based on NWEA national growth norms. Projections take into account the student's initial score, grade level, and time between tests.

26 Projected growth, growth projection, or typical growth: The change in RIT score that about half of US students will make over time, based on student growth norms. The student's initial score plus projected growth equals projected RIT. The Student Growth Summary report shows grade-level growth projections, which are based on school growth norms.

31 Conditional growth index: This index allows for growth comparisons between students. It incorporates conditions that affect growth, including weeks of instruction before testing and students' starting RIT scores. A value of zero corresponds to mean growth, indicating growth matched projection.

32 Conditional growth percentile: The conditional growth index (see annotation 31) translated into national percentile rankings for growth.

40 Set goal: Set custom growth goals for your students. In the example, the educator and student have already set a catch-up growth goal for winter and are about to set one for spring.

41 Rapid guess percentage: Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

Tips and tricks

Filter linking studies: You can click on these boxes to filter out views for state proficiency tests and ACT/SAT linking study information.

Quickly locate a different student: Click on this icon for a drop-down menu of the rest of the students in the class.

Print and share: Use this feature to print the screen, create and print a batch PDF, or create a Family Report for the student you are viewing.

FAMILY REPORT

Family Report—Key Information

What this report offers

- Student-level report showing key results from a given test term so you can communicate with students and their families
- Shows all subjects tested for a student*, organized by term

*Course-specific test data will not be displayed for test events between July 24, 2020, and the MAP Growth software release in August 2021.

Questions it helps answer

- How do the growth percentile and achievement percentile compare for this student?
- Is this student on track? (State assessment, ACT, SAT)
- What are this student's relative strengths and weaknesses?
- How can I leverage those relative strengths and suggested areas of focus to help this student?
- What is an appropriate growth goal for this student?
- How can I help this student set an appropriate stretch goal?
- What supports are needed to help reach the stretch goal?

When to use it

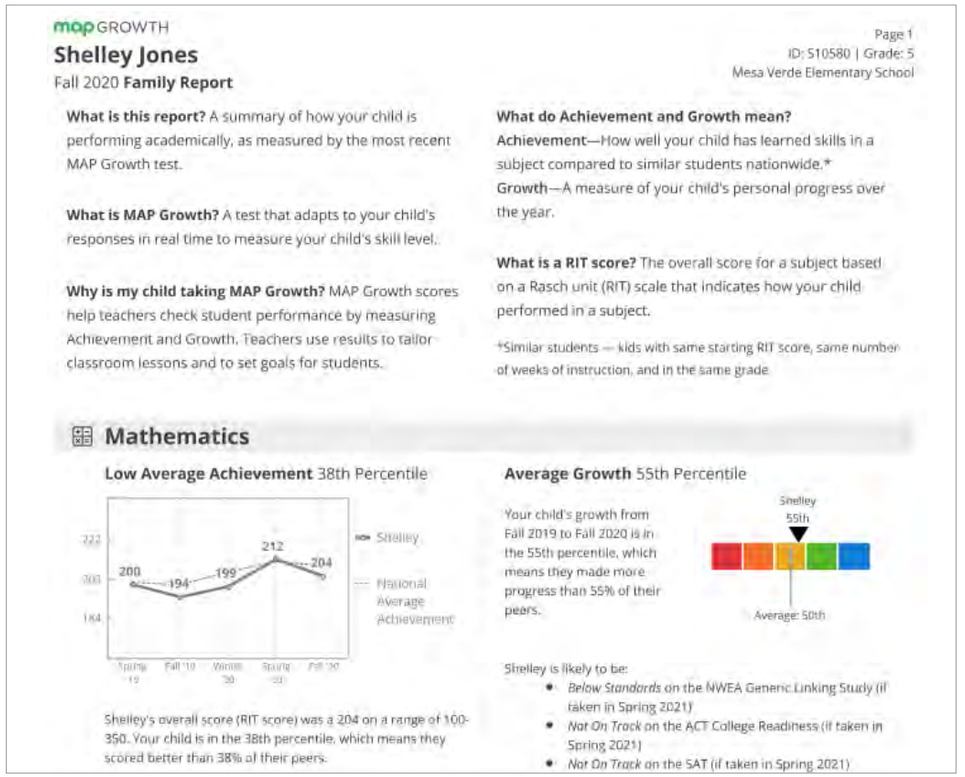
- After testing, to see results
- After two test events, to see growth data
- Anytime you need to talk to families or students about performance

Things to consider

- Report can access data for all prior years of testing
- It will not include data from outside of your test window
- You can choose to include comparisons to the SAT, ACT, or your state test linking study
- Report can be accessed via the student profile or from the reports landing page
- Report can be printed for one, some, or all students in a given class via batch printing

Notes

Family Report



mapGROWTH

Shelley Jones

Fall 2020 **Family Report**

Page 1
ID: 510580 | Grade: 5
Mesa Verde Elementary School

What is this report? A summary of how your child is performing academically, as measured by the most recent MAP Growth test.

What is MAP Growth? A test that adapts to your child's responses in real time to measure your child's skill level.

Why is my child taking MAP Growth? MAP Growth scores help teachers check student performance by measuring Achievement and Growth. Teachers use results to tailor classroom lessons and to set goals for students.

What do Achievement and Growth mean?
Achievement—How well your child has learned skills in a subject compared to similar students nationwide.*
Growth—A measure of your child's personal progress over the year.

What is a RIT score? The overall score for a subject based on a Rasch unit (RIT) scale that indicates how your child performed in a subject.

*Similar students — kids with same starting RIT score, same number of weeks of instruction, and in the same grade.

Mathematics

Low Average Achievement 38th Percentile

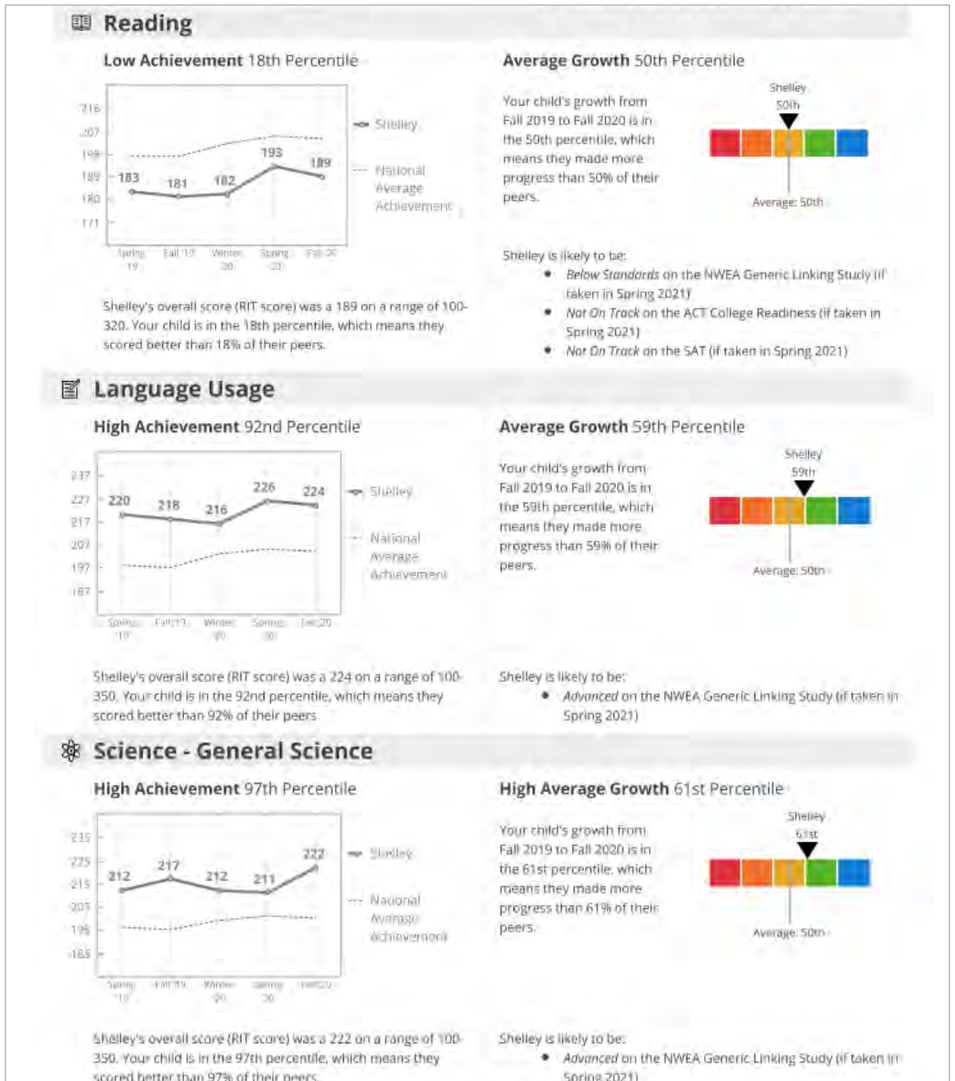
Shelley's overall score (RIT score) was a 204 on a range of 100-350. Your child is in the 38th percentile, which means they scored better than 38% of their peers.

Average Growth 55th Percentile

Your child's growth from Fall 2019 to Fall 2020 is in the 55th percentile, which means they made more progress than 55% of their peers.

Shelley is likely to be:

- *Below Standards* on the NWEA Generic Linking Study (if taken in Spring 2021)
- *Not On Track* on the ACT College Readiness (if taken in Spring 2021)
- *Not On Track* on the SAT (if taken in Spring 2021)



Reading

Low Achievement 18th Percentile

Shelley's overall score (RIT score) was a 189 on a range of 100-320. Your child is in the 18th percentile, which means they scored better than 18% of their peers.

Average Growth 50th Percentile

Your child's growth from Fall 2019 to Fall 2020 is in the 50th percentile, which means they made more progress than 50% of their peers.

Shelley is likely to be:

- *Below Standards* on the NWEA Generic Linking Study (if taken in Spring 2021)
- *Not On Track* on the ACT College Readiness (if taken in Spring 2021)
- *Not On Track* on the SAT (if taken in Spring 2021)

Language Usage

High Achievement 92nd Percentile

Shelley's overall score (RIT score) was a 224 on a range of 100-350. Your child is in the 92nd percentile, which means they scored better than 92% of their peers.

Average Growth 59th Percentile

Your child's growth from Fall 2019 to Fall 2020 is in the 59th percentile, which means they made more progress than 59% of their peers.

Shelley is likely to be:

- *Advanced* on the NWEA Generic Linking Study (if taken in Spring 2021)

Science - General Science

High Achievement 97th Percentile

Shelley's overall score (RIT score) was a 222 on a range of 100-350. Your child is in the 97th percentile, which means they scored better than 97% of their peers.

High Average Growth 61st Percentile

Your child's growth from Fall 2019 to Fall 2020 is in the 61st percentile, which means they made more progress than 61% of their peers.

Shelley is likely to be:

- *Advanced* on the NWEA Generic Linking Study (if taken in Spring 2021)

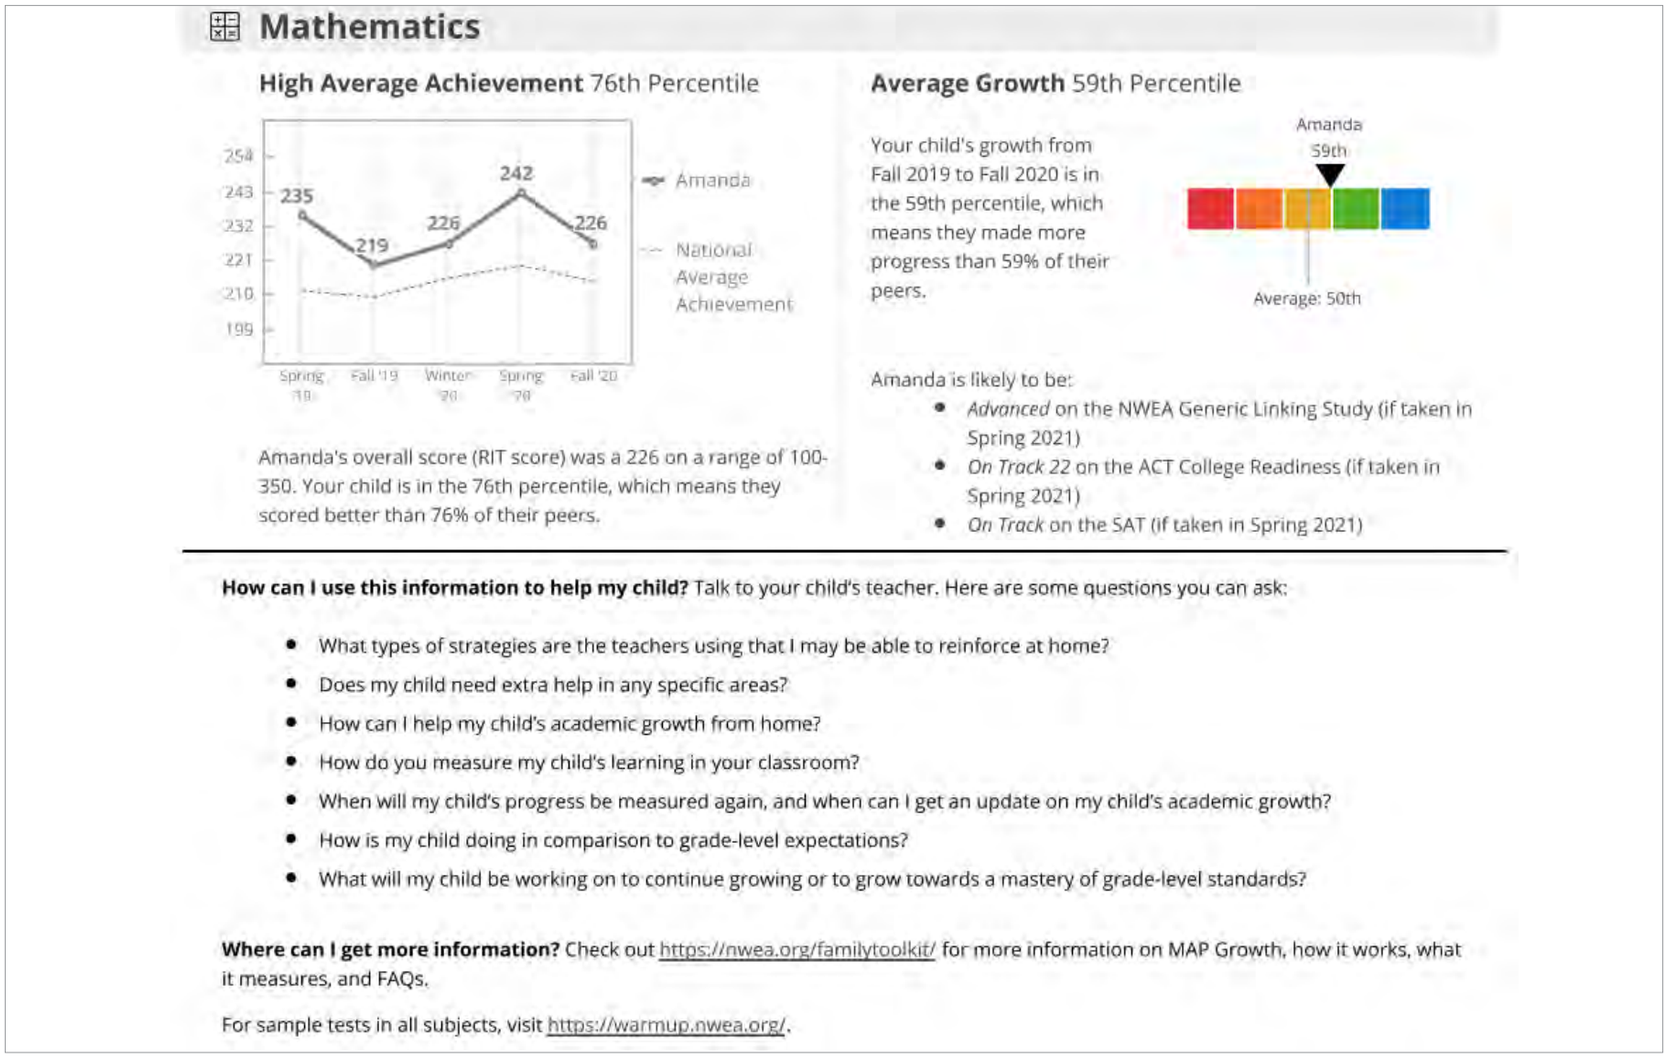
Note: This report is only available for the most recent test term.

Instructor | Administrator | School Coordinator | District Coordinator

FAMILY REPORT: CLOSE-UP VIEW

Family Report

Close-Up View



Mathematics

High Average Achievement 76th Percentile

Amanda's overall score (RIT score) was a 226 on a range of 100-350. Your child is in the 76th percentile, which means they scored better than 76% of their peers.

Average Growth 59th Percentile

Your child's growth from Fall 2019 to Fall 2020 is in the 59th percentile, which means they made more progress than 59% of their peers.

Amanda is likely to be:

- *Advanced* on the NWEA Generic Linking Study (if taken in Spring 2021)
- *On Track 22* on the ACT College Readiness (if taken in Spring 2021)
- *On Track* on the SAT (if taken in Spring 2021)

How can I use this information to help my child? Talk to your child's teacher. Here are some questions you can ask:

- What types of strategies are the teachers using that I may be able to reinforce at home?
- Does my child need extra help in any specific areas?
- How can I help my child's academic growth from home?
- How do you measure my child's learning in your classroom?
- When will my child's progress be measured again, and when can I get an update on my child's academic growth?
- How is my child doing in comparison to grade-level expectations?
- What will my child be working on to continue growing or to grow towards a mastery of grade-level standards?

Where can I get more information? Check out https://nwea.org/familytoolkit/ for more information on MAP Growth, how it works, what it measures, and FAQs.

For sample tests in all subjects, visit https://warmup.nwea.org/.

Note: This is a close-up view of the Family Report to show detail. This exact view can't be printed using the MAP Growth reporting system.

Tips and tricks

Batch printing: This report can only be batch-printed for a single classroom at a time, not for an entire grade level, school, or district.

Instructor | Administrator | School Coordinator | District Coordinator

RETEST RECOMMENDED: RAPID GUESSING REPORT

Retest Recommended: Rapid Guessing Report—Key Information

What this report offers

- School- or district-level spreadsheet showing students who completed testing but exceeded the rapid-guessing threshold, so you can consider whether to retest

Questions it helps answer

- Which students should be considered for retesting within the same term due to high rapid guessing?

When to use it

- After testing, to see results

Things to consider

- Report can access data for the current year of testing and one year prior
- It will not include data from outside of your test window
- It can be filtered by school, grade, and subject
- The report shows students who have a rapid guess percentage at or above 30% of questions
- Consider running this report before your test window is closed so you can retest as appropriate

Notes

Retest Recommended: Rapid Guessing Report

11 **Instructional area:** A learning area (e.g., geometry) within a subject (e.g., math). On the Class Breakdown by Instructional Area report, click the instructional area to access the Learning Continuum Class View.

12 **RIT score:** A student's overall scale score on the test for a given subject.

19 **Instructional area score:** The student's performance in the instructional area tested. Most reports show instructional area scores as RIT score ranges (e.g., 187–199). The Student Profile report shows the midpoint of the student's RIT score range. Class Breakdown reports sort students into 10-point RIT bands, based on the midpoint of their instructional area RIT score range.

41 **Rapid guess percentage:** Percent of responses when a student answered a test question in well below the average response time measured by NWEA. The response is so fast that the student could not actually view and comprehend the whole question.

K–2 SCREENING AND SKILLS CHECKLIST: BY STUDENT

Screening & Skills Checklist: Student Report—Key Information

What this report offers

- Student-level results from certain Screening or Skills Checklist tests to focus instruction for each student

Questions it helps answer

- What baseline information can I get about a student in the earliest stages of learning? (Screenings)
- What can I learn about a student's specific skills and knowledge? (Skills Checklists)
- How might I need to modify and focus instruction for this student?

When to use it

- After testing, to see results
- As part of the instructional decision-making process
- Anytime you need to talk to families or students about performance

Things to consider

- Results can be accessed for three prior terms for all tests completed within the date ranges entered
- Results are reported in percentage correct, not a RIT score
- These are not growth-based tests
- Get more information on Skills Checklists and Screenings
